## BRICS Joint Statistical Publication, 2021: Brazil, Russia, India, China, South Africa

### Acknowledgement

The Social Statistics Division of National Statistical Office (NSO) of Ministry of Statistics and Programme Implementation, Government of India gratefully acknowledges the contribution of the members of the BRICS Countries and National data source agencies, main ones of which are listed below, for providing the requisite information/ statistics, without which this multifarious collection of statistics could not have been possible:

1. Brazilian Institute of Geography and Statistics (IBGE), Brazil
2. Federal State Statistics Service of the Russian Federation (ROSSTAT), Russia
3. National Bureau of Statistics China (NBS), China
4. Statistics South Africa (Stats SA), South Africa
5. Following Organisations of Government of India
  - i. Registrar General of India, Ministry of Home Affairs
  - ii. Ministry of Health and Family Welfare
  - iii. Ministry of Agriculture and Farmer's Welfare
  - iv. Ministry of Finance
  - v. Ministry of Commerce and Industry
  - vi. Ministry of Tourism
  - vii. Reserve Bank of India
  - viii. National Sample Survey, Ministry of Statistics and Programme Implementation

### Access

Soft Copies of this publication and the tables contained therein are available for download, free of charge, from:  
<https://mospi.gov.in/web/mospi/reports-publications>.

### Citation and Reproduction

Reproduction is permitted provided an acknowledgment of the source is made.

Material contained in this publication attributed to third parties are subject to third party copyright and are also subject to separate terms of use and restrictions, including restrictions in relation to any commercial use.

### Disclaimer

The contents of this publication have been designed to act as a compendium of general information with comparable statistics of the five countries. The publication has been prepared on the basis of information received from the BRICS member countries. Though every effort has been made in preparing this publication to ensure correctness of information, NSO accepts no responsibility for the differences between the stated figures and those published elsewhere. Due to the dynamic changes in the datasets, users are requested to check for updates with the source agencies.

**Feedback and suggestions** for the publication are welcomed by the Social and Welfare Statistics (SWS) team at [cso.ssd-mospi@gov.in](mailto:cso.ssd-mospi@gov.in).

## Foreword

In the meeting of Foreign Ministers' of Brazil, Russia, India and China during the 64<sup>th</sup> General Assembly of UN, held in New York in September, 2009; a strong need was felt to put on a single platform all the important data of all these 4 Countries and disseminate the same for their mutual benefit. South Africa joined this association BRICS during the year of 2010. To put on a single platform all the important data of all these Countries viz. Brazil, Russia, India, China and South Africa i.e. BRICS countries brought out their first Edition of BRICS Joint Statistical Publication (JSP) in the year of 2010. Every year, one of the BRICS countries brings out this publication. Last year, BRICS JSP 2020 was brought out by Russia, and this year, the present issue-which is the twelfth issue of this annual publication, is being brought out by India.

The publication has 15 Chapters. The first Chapter is a summary of the remaining 14 chapters, presenting general information with comparable statistics of the five countries, while the other 14 chapters reflect the different aspects of the past development and current status of the individual countries. In each of these 14 chapters, there are two components, summary table with graphs followed by country tables. The summary table and graphs present the most comparable information among the five countries while the country tables show more detailed information specific to the individual countries. In addition, India has also brought out BRICS JSP (Snapshot), 2021; a shorter version of BRICS JSP, 2021, for engagement of wide range of users, as per the agreement by the member countries during the 12<sup>th</sup> Meeting of Heads of BRICS NSOs organized by ROSSTAT, Russia in December 2020.

National Statistical Office (NSO), India would like to extend its gratitude to all BRICS NSOs for their contributions and continuous support in preparation of the BRICS JSP. Owing to COVID-19 pandemic situation, this year all processes and arrangements took more time and efforts for finalizing the BRICS Joint Statistical Publication, 2021.

We hope that both the publications will be highly useful to all the stakeholders and electronic version of the publication will become more interactive in future.

**Dr. Eduardo Luiz Gonçalves Rios Neto**

President

Brazilian Institute of Geography and Statistics (IBGE)

**Mr. Pavel Malkov**

## Footnotes:

### Brazil

- (1) For the surface of Brazil was maintained the value of 8,510,345,538 km<sup>2</sup>, published in the DOU n° 41 of 03/03/2021, according to Resolution No. 47 of March 1, 2021.
- (2) Information about the mid-year population and demographic indicators, were obtained by a projection of the population by sex and age groups by the component method for the Period 2000-2060, Review 2018.

### India

- (3) Projected population as on 1st July, 2020 based on Census 2011. The area used for working out population density by National Census Authority of India viz Registrar General of India is 3,166,414 sq kms (not 3,287,264 sq kms).
- (4) Data pertain to the year 2019.

### China

- (6) Data pertain to the year 2019.

### Brazil

- (1) Information about the mid-year population and demographic indicators were obtained by a projection of the population by sex and age groups by the component method for the Period 2000 - 2060.
- (6) Population 15 years old and over. Data from ILOSTAT Database.
- (11) Data are derived from quarterly GDP results.
- (16) Gross domestic expenditure on R & D as percentage of GDP. Data are from UIS database.

### Russia

- (17) Proportion of internal research and development expenditure to GDP.
- (21) Calculations of Gini Index are based on macroeconomical per capita income data and information of sample household budget survey.
- (24) Provisional data.
- (28) Since 2020 - dewatered, demineralized and stabilized petroleum, including natural gas liquids.
- (33) Catch of fish and other live wild aquatic organisms.
- (36) Length of public paved roads in operation (including highways). At the end of the year.

### India

- (2) Projected population is as on 1st July based on Report of Population projections for India and States 2011-2036 based on Census 2011.
- (4) For the period 2016-18.
- (5) For the period 2014-18.
- (7) Share of Labour Force belong to the population of the age group 15 years and above.
- (8) Estimates are based on PLFS, July 2019 – June 2020.
- (12) GDP in US\$ is computed using average Real Exchange Rate is for the period April 1st, 2020 to March 10th, 2021 and relate to new base year (2011-12).
- (18) Information as on 1.4.2018.
- (25) Provisional Data. Information is as per financial year.
- (26) Data pertains to Calendar year.
- (29) April-December, 2020.
- (31) The period of agricultural year is from July (of the year indicated in the table) to June (next year).
- (32) As per third advance Estimates 2020-21.
- (34) The data pertains to March (of the year indicated in the table) to February (next year).
- (35) Estimated figure
- (37) The information is as on 31st March of the Year indicated in the table. The information on Highways includes both National and State Highways (Excluding Rural Roads, Project Roads, Urban Roads etc).
- (38) Provisional data.
- (40) The Consumer price index of India pertains to Combined Sector. Information for 2014-2020 is based on the current series of CPI with Base (2012 =100).

### China

- (3) Year-end population.
- (9) Share of number of employed persons to national population.
- (10) Registered unemployment rate in urban areas.
- (13) GDP and Per Capita GDP in US dollars are converted using the annual average exchange rates.
- (14) Data of GDP are calculated at producers' prices.
- (15) Preliminary data.
- (19) Government appropriation for education to GDP.
- (20) Total expenditure on health as percentage of GDP.
- (22) Data of Gini coefficient are based on per capita annual disposable income.
- (27) Refers only to color TV.
- (30) Electric power in total primary energy production and total consumption of energy are converted on the basis of equal caloric value.

### South Africa

- (23) Gini is per capita expenditure excluding taxes.
- (39) This includes gold.
- (40) Major meat (beef and veal, mutton, goats, poultry).

## Footnotes

### Brazil

- (1) Data derived from Population Projection by Sex and Age for the Period 2000–2060, Review 2018.
- (5) Urban percentage estimated by linear interpolation for the intercensal period 2000–2010 and designed by the methodology of the United Nations from 2010. These results are not derived from population projection.

### India

- (2) For 2000, information pertains to projected population as on 1st July based on the Report of Population projections for India and States 1991-2016 based on Census 1991. For 2011-2020, the information pertains to projected population as on 1st July based on Report of Population projections for India and States 2011-2036 based on Census 2011.

### China

- (3) Data in 2000 and 2010 are estimated from the Fifth and Sixth National Population Census respectively. Data in 2005 and 2015 are estimated from the National 1% Population Sample Survey. The other data are estimated from the annual national sample survey on population changes. Figures of 2020 are population in reference time 0:00 1st. Nov. For historical data, please refer to the newly version. Statistical discrepancies on totals and relative figures due to rounding are not adjusted here.
- (4) Year-end population.

### South Africa

- (6) Population estimation series not active in 2000. Population figures can not be verified.
- (7) Population estimation series does not split population into rural/urban.

## Explanatory Notes

## General Notes

**Total population (Mid-Year)** - Information about the population in half of the year, was obtained by a projection of the population by sex and age groups by the component method. This method consists of working separately each component of population dynamics of the population; fertility, mortality and migration.

**Sex ratio** - expressed as the number of males for every 100 females. It is obtained from the ratio of the male and female populations by age group.

**Crude marriage rate** - The nuptiality rate is obtained by dividing the number of marriages of spouses 15 years of age or older by the population of this same age group multiplied by a thousand.

**Total fertility rate** - The total fertility rate expresses the number of children who, on average, would a woman belonging to a hypothetical cohort of women during their fertility life (15 - 49 years) that had their children according to the fertility rates by age study period and were not exposed to the risk of mortality from birth to the end of the fertile period.

**Infant mortality rate** - The infant mortality rate is defined as the number of deaths of infants under one year of age (per thousand live births) in a given geographical area and time period, and is interpreted as the estimated risk of a born live to die during their first year of life.

**Natural Increase Rate of Population** - The rate of natural increase is obtained by the difference between the crude birth rates and mortality.

**Crude Birth rate** - Number of Births per 1000 population in a given year. This definition excludes fetal deaths.

**Crude Death Rate** - Number of Deaths per 1000 population in a given year.

**Expectation of life at birth** - Average number of years a new born child is expected to live under current mortality conditions.

**Under-five mortality rate** - (according to WHO methodology): The probability of dying of a child born in a specific year before reaching the age of five, expressed per 1000 live births.

**Crude divorce rate** - refers to ratio of divorce couples to the annual average population for the reference year, the formula is:

$$\text{Crude divorce rate} = \frac{\text{Number of couples divorced for the reference year}}{\text{Annual Average population}} \times 1000$$

**Dependency rate** - number of people aged 0-15 and 60 and over to the population 15-59.

**Census** - A canvass of a given area, resulting in an enumeration of the entire population and often the compilation of other demographic, social and economic information pertaining to that population at a specific time.

## Russia

The information on births, deaths, marriages and divorces is received on the basis of annual processing of data contained in the records of Civil Registrar Offices.

## India

**Neo Natal Mortality Rate** - Number of infant deaths less than 29 days of life per thousand live births

**Number of victims of intentional homicide** - Number of victims registered under murder (Section 302 IPC).

**Source**

Source: Ministry of Statistics and Programme Implementation, NSS Survey Reports: Employment and Unemployment Situation in India (various issues) for the estimates corresponding to the periods 2000, 2012. For 2018, 2019 and 2020, the estimates are obtained from the Annual Report, Periodic Labour Force Survey (PLFS), 2017-18, 2018-19 & 2019-20. These results are not comparable to the earlier estimates on account of a change in sampling methodology.

**Footnotes**

The information is based on Sample Surveys conducted by National Sample Survey Office & pertains to the Survey Period July (Previous Year) to June (Year Indicated in the table). For example, information for the year 2000 pertains to survey period July 1999 to June 2000. The information is based on Usual Activity Status taking into account both Principal & Subsidiary activity.

(1) There is some population in the age group of 0-14 (especially in the age group of 10-14) which is also employed.

(2) For 2018, 2019 and 2020, figures are estimated on the basis of PLFS 2017-18, 2018-19 & 2019-20 and Report of Technical Committee on Population Projections for the States of India, 2011-2036, Office of Registrar General of India.

## Explanatory Notes

## General notes

**1 Labour Force:** Persons who were either 'working' (or employed) or 'seeking or available for work' (or unemployed) constituted the labour force. This is for a particular reference period.

**2 Unemployment Rate (UR):** UR is defined as the number of persons unemployed per 1000 in the labour force (which includes both employed and unemployed)

**3 Workers (or employed persons):** Persons who were engaged in any economic activity or who, despite their attachment to economic activity, abstained from work for reasons of illness, injury or other physical disability, bad weather, festivals, social or religious functions or other contingencies necessitating temporary absence from work, constituted workers. Unpaid helpers who assisted in the operation of an economic activity in the household farm or non farm activities were also considered as workers.

**4 Activity status, Labour Force, Employment, Unemployment:** It is the activity situation in which a person was found during a reference period with regard to the person's participation in economic and non-economic activities. According to this, a person could be in one or a combination of the following three broad activity statuses during reference period:

(i) Working or being engaged in economic activity .

(ii) Being not engaged in economic activity (work) but either making tangible efforts to seek 'work' or being available for 'work' if 'work' is available and

(iii) Being not engaged in any economic activity (work) and also not available for (work)

Broad activity statuses mentioned in (i) and (ii) above are associated with 'being in labour force' and the last with 'not being in the labour force'. Within the labour force, broad activity status (i) and (ii) were associated with 'employed' and 'unemployed' respectively.

**Primary Sector:** of industries includes Agriculture, Forestry & Fishing and Mining & Quarrying.

**Secondary Sector:** of industries includes Manufacturing, Electricity Gas & Water Supply and Construction.

**Tertiary Sector:** of industries includes other industries of national economy.

## Brazil

Reference Week is the last complete week of September each year.

## Work

It was considered as work in the exercise of economic activity:

a) Occupation paid in cash, products, goods or benefits (housing, food, clothes etc.) in the production of goods and services.

b) Occupation paid in cash or benefits (housing, food, clothes etc) in domestic services.

c) Occupation without pay in the production of goods and services, performed at least one hour per week:

– Helping a member of the household who had work as: employee in the production of primary goods (which includes the activities of agriculture, forestry, livestock, vegetable or mineral extraction, hunting, fishing and fish farming): or own account or employer in any activity;

– Helping in a religious, charitable or cooperative institute or;

– As apprentice or trainee, or;

d) Occupation developed for at least one hour per week

– In the production of goods, of the branch that includes the activities of agriculture, forestry, livestock, vegetal extraction, fishing and fish farming, for own consumption or for the consumption of at least one member of household, or;

– In construction of buildings, private roads, wells and other improvements (except only repairs work) for their own use or for the use of at least one member of the household.

**Employed person:** A person who performed some work during all or part of the reference week. It is also included as employed persons who have not exercised their paid work during the reference week due to vacation, leave, strike etc.

**Unemployed person:** A person without work which had taken specific action to seek work (getting in touch with employers; enrolling or going in for official examination for a government job; registration at employment agency, union or similar body, placing or answering job advertisement; seeking assistance of relative, friend or colleague to find a job; taking an action to start a business; etc.) in the reference week.

## The New Household Sample Survey of IBGE (PNAD Continuous)

**The National Household Sample Survey:** PNAD was an annual survey and was discontinued in 2015. The PNAD was replaced with updated methodology, by the Continuous National Household Sample Survey — PNAD Continuous.

[back to content](#)

PNAD Continuous is a quarterly survey and started in 2012. There are important methodological differences between PNAD and PNAD Continuous. Therefore, the results of these two surveys are not comparable. Thus, the results of the PNAD were erased and replaced by those of PNAD Continuous. PNAD Continuous started with the labour force investigation, associated with basic demographic and educational information. Gradually other supplementary themes and topics were being aggregated.

According to the rotation scheme adopted by PNAD Continuous, a housing unit stays in the sample for five quarters; it is then withdrawn from the sample. Some supplementary themes and topics are surveyed in the determined interviews in all four quarters of the year, and others are concentrated in the determined quarter of the year..

Housing characteristics are investigated in housing units which are being interviewed for the first time in each of the four quarters of the year, and information and communicating technologies characteristics are concentrated in the fourth quarter of the year. So, both themes started being surveyed in 2016.

Data on labour force are presented in accordance with Resolution 1 of the 19th International Conference of Labour Statisticians. The numbers of labour force include data on employed and unemployed based on the results of the quarterly household sample survey

### Russia

Data on labour force are presented in accordance with the standards of the International Labour Organization. The number of labour force includes data on employed and unemployed based on the results of labour force surveys. Before 2017 the monitoring of labour force was carried out for persons of 15 - 72 years old, since 2017 it is carried out for persons 15 years and over.

### India

The National Sample Survey Office, Ministry of Statistics & Programme Implementation carries out survey on the subject of employment and unemployment and labour force characteristics at the National and State levels.

The Survey was earlier conducted Quinquennially along with some annual surveys in between. Considering the importance of availability of labour force data at more frequent time intervals, National Statistical office launched Periodic labour force Survey (PLFS) in 2017. The survey is conducted on quarterly basis. The reference period is usually July - September, October- December, January-March and April-June. The Report includes status based on Usual Activity (Reference Period 365 days), Current Weekly Status (Reference Period 7 days).

**Usual principal activity status:** The usual activity status refers to the activity status of a person during the reference period of 365 days preceding the date of the survey. The activity status on which a person spent relatively longer time during the 365 days is considered as the usual principal activity status of the person.

**Usual subsidiary economic activity status:** A person whose usual principal status was determined on the basis of the major time criterion could have pursued some economic activity for a shorter time throughout the reference year of 365 days preceding the date of survey or for a minor period, which is not less than 30 days, during the reference year. The status in which such economic activity was pursued was the subsidiary economic activity status of that person.

**Usual activity status considering principal and subsidiary status taken together:** The usual status, determined on the basis of the usual principal activity and usual subsidiary economic activity of a person taken together, is considered as the usual activity status of the person and is written as usual status (ps+ss). According to the usual status (ps+ss), workers are those who perform some work activity either in the principal status or in the subsidiary status. Thus, a person who is not a worker in the usual principal status is considered as worker according to the usual status (ps+ss), if the person pursues some subsidiary economic activity for 30 days or more during 365 days preceding the date of survey.

**Unemployed:** Persons, who owing to lack of work, had not worked but either sought work through employment exchanges, intermediaries, friends or relatives or by making applications to prospective employers or expressed their willingness or availability for work under the prevailing conditions of work and remuneration, were considered as those who were 'seeking or available for work' or unemployed

### China

**Employed persons:** refer to persons above a specified age who had labour capacity and performed some social work for compensation or business gains. Specifically, it refers to all persons, aged 16 and over, who performed some work for compensation or business gains for one hour or more during the reference period; or who had work units or sites but were temporarily not at work during the reference period.

**Registered unemployed persons in urban areas:** refer to the persons with non-agricultural household registration at certain working ages (16 years old to retirement age), who are capable of working, unemployed and willing to work, and have been registered at the local employment service agencies to apply for a job.

**Registered unemployment rate in urban areas:** refers to the ratio of the number of the registered unemployed persons to the sum of the number of persons employed in various units (minus the employed rural labour force, re-employed retirees, and Hong Kong, Macao, Taiwan or foreign employees), laid-off staff and workers in urban units, owners of private enterprises in urban areas, owners of self-employed individuals in urban areas, employees of private enterprises in urban areas, employees of self-employed individuals in urban areas, and the registered unemployed persons in urban areas.

## Footnotes

### Brazil

- (1) Data for 2019 and 2020 are derived from quarterly GDP results.
- (2) Data of 2019 and 2020 are preliminary estimation.

### Russia

- (7) At constant prices.

### India

- (3) GDP in US\$ is computed using average Real Exchange Rate taken from RBI's website (Link: <https://dbie.rbi.org.in>). Data for Financial Year 2020-21 is available till March 10th, 2021 and the average is based on the data for the period April 1st, 2020 to March 10th, 2021.
- (8) Data relate to new base year (2011-12).

### China

- (4) GDP and Per Capita GDP in US dollars are converted using the annual average exchange rates.
- (5) Data of GDP are calculated at producers' prices.
- (6) Preliminary data.

Footnotes

- (1) Data contains changes due to: implementation of an international methodology for the evaluation of housing services produced and consumed by homeowners; estimation of fixed capital consumption based on its current market value; harmonization of data on exports and imports with balance of payments data; updating of data on the development of the "Input-output" base tables for 2011 and 2016 and on the results of Agricultural Census of 2016; including the assessment of services for domestic workers, as well as the implementation of the 2008 SNA statements on estimation of research and development results and weapons systems and use of the services of the Central Bank of the Russian Federation.
- (2) Gross value added by economic activity at basic prices. Before 2011 year data are presented according to NACE 1 Classification of economic activities, since 2011 - according to NACE 2 Classification.
- (3) Index of labour productivity is calculated as GDP volume index dividing by labour input index.

Footnotes

- (1) According to the results of China's Fourth National Economic Census, Historical GDP data from 2014 to 2018 have since been revised.
- (2) GNI in US dollars are converted using the annual average exchange rates.
- (3) The components of GDP by production approach are calculated at producers' prices.
- (4) After 2014, China economic activities are categorized into three strata of industries according to the "Three Strata of Industries Classification Regulations" enacted by NBS in 2012, and historical data are revised accordingly. Three strata of industry in China economic activities are categorized into the following three strata of industry: Primary industry refers to agriculture, forestry, animal husbandry and fishery industries (except support service activities to agriculture, forestry, animal husbandry and fishery industries). Secondary industry refers to mining and quarrying (except auxiliary activities of mining and quarrying), manufacturing (except repairs for metal products, machinery and equipment), production and supply of electricity, steam, gas and water, and construction. Tertiary industry refers to all other economic activities not included in the primary or secondary industries.

## Explanatory Notes

## General notes

National product by definition is a measure in monetary terms of the volume of all goods and services produced by an economy during a given period of time, accounted without duplication. The measure obviously has to be in value terms as the different units of production and different measures of services are not directly added. In the case of a closed economy, the measure amounts to domestic product (Gross Domestic Product).

**Gross national income (GNI)**

$GNI = GDP + \text{compensation of employees and property income receivable from the rest of the world} - \text{compensation of employees and property income payable to the rest of the world}$ .

**Government final consumption expenditure**

Government final consumption expenditure comprises the compensation of employees and purchases of goods and services by the government including purchases abroad. Compensation of employees of general government consists of wages and salaries and social security contribution.

## Brazil

The Brazilian System of National Accounts reference 2010, as established by international recommendations, is in accordance with the new manual of the System of National Accounts 2008, SNA 2008.

**Expenditure measure of GDP:** The expenditure measure of gross domestic product (GDP) is derived as the sum of expenditure on final consumption plus gross capital formation plus exports less imports.

**Gross fixed capital formation:** in a particular category of fixed asset consists of the value of producers' acquisitions of new and existing products of this type less the value of their disposals of fixed assets of the same type.

**Gross fixed capital formation:** is measured by the total value of a producer's acquisitions, less disposals, of fixed assets during the accounting period plus certain specified expenditure on services that adds to the value of non-produced assets.

**Gross capital formation:** shows the acquisition less disposal of produced assets for purposes of fixed capital formation, inventories or valuables.

**Expenditures on goods and services:** are defined as the values of the amounts that buyers pay, or agree to pay, to sellers in exchange for goods or services that sellers provide to them or to other institutional units designated by the buyers.

**Goods and services account:** The goods and services account shows the balance between the total goods and services supplied as resources to the economy as output and imports (including the value of taxes less subsidies on products not already included in the valuation of output) and the use of the same goods and services as intermediate consumption, final consumption, capital formation and exports.

**Final consumption expenditure:** is the amount of expenditure on consumption goods and services.

**Household final consumption expenditure:** consists of the expenditure, including expenditure whose value must be estimated indirectly, incurred by resident households on individual consumption goods and services, including those sold at prices that are not economically significant and including consumption goods and services acquired abroad.

**General government final consumption expenditure:** consists of expenditure, including expenditure whose value must be estimated indirectly, incurred by general government on both individual consumption goods and services and collective consumption services.

Final consumption expenditure of NPISHs consists of the expenditure, including expenditure whose value must be estimated indirectly, incurred by resident NPISHs on individual consumption goods and services and possibly on collective consumption services.

**Inventories:** are produced assets that consist of goods and services, which came into existence in the current period or in an earlier period, and that are held for sale, use in production or other use at a later date.

**Primary industry:** Agriculture, Forestry, Animal Husbandry and Fishery.

**Secondary industry:** Mining, Manufacturing, Electricity, Gas and Water and Construction.

**Tertiary industry:** The other industries of national economy.

## Russia

**Primary industry:** Agriculture, Forestry, Animal Husbandry and Fishery. Before 2011 year data are presented according to NACE 1 Classification of economic activities, since 2011 - according to NACE 2 Classification.

**Secondary industry:** Mining, Manufacturing, Electricity, Gas and Water Supply and Construction. Before 2011 year data are presented according to NACE 1 Classification of economic activities, since 2011 - according to NACE 2 Classification.

**Tertiary industry:** The other industries of national economy. Before 2011 year data are presented according to NACE 1 Classification of economic activities, since 2011 - according to NACE 2 Classification.

[back to content](#)

**Gross domestic product (GDP):** at market prices is the final result of the production activity of all producer units within a country area. It may be estimated using three methods: production, use of incomes (or expenditure method) and GDP formation by income sources. GDP, measured by production method, is defined as a difference between total output of goods and services for the whole economy, on the one hand, and intermediate consumption, on the other, or otherwise as a sum of value added in the sectors of the economy. GDP, measured by the method of use of incomes, represents a sum of expenditures of all the institutional units – residents for final consumption, gross capital formation and net exports. GDP calculated on the basis of income sources reflects primary incomes accumulated in the process of production by all institutional units grouped by sectors of the economy.

**Final consumption expenditures:** comprise final consumption expenditures of households, final consumption expenditures of public administration on individual goods and services and collective services, final consumption expenditures of non-profit institutions serving of households.

**Gross capital formation:** indicates net acquisition by resident units of goods and services produced in the current period or imported, but not consumed in that period. Gross capital formation includes gross fixed capital formation, changes in inventories, as well as net acquisition of valuables.

**Net exports of goods and services:** are calculated as a difference between exports and imports and include trade turnover of Russia with foreign countries.

### India

The National Statistical Office (NSO) in the Ministry of Statistics & PI compiles estimates of national accounts aggregates and publishes them in its annual publication called National Accounts Statistics. The estimates are based on performance during the Financial year (April- March (next year)). NSO brings out First Revised Estimates in January for the preceding year along with revision of estimates for a few earlier financial years using detailed and more comprehensive data. NSO also compiles Advance Estimates for the current financial year and releases it two months before the close of the year. Various aggregates brought out by NSO include GDP, NDP, GNI, and NNI, Product and Production taxes and subsidies, Consumption of Fixed Capital, Net National Disposable Income, Personal Disposable Income, Private Final Consumption Expenditure (PFCE), Government Final Consumption Expenditure (GFCE), exports and imports, Gross & Net Capital Formation, Savings, etc.

The economy of India is not closed as there are transactions with rest of the world in the form of exports, imports, loans etc. This gives rise to the concept of national or domestic. Gross Domestic Product refers to production of all resident units within the borders of a country, which is not exactly same as the production of all productive activities of residents. Some of the productive activities of residents may take place abroad. Conversely, some production taking place within a country may be attributed to temporary and seasonal foreign labour.

$GNI = GDP + \text{compensation of employees and property income receivable from the rest of the world} - \text{compensation of employees and property income payable to the rest of the world}$

**Final consumption expenditure:** includes both Private Final Consumption Expenditure & Government Final Consumption Expenditure.

**Private final consumption expenditure:** The household consumption expenditure referred to as private final consumption expenditure (PFCE) in National Accounts Statistics (NAS), consists of expenditure by households and non-profit institutions serving households on durable, semi-durable and non-durable consumer goods and services.

**Government final consumption expenditure:** Government final consumption expenditure comprises the compensation of employees paid and purchases of goods and services by the government used for production of non-market services. Compensation of employees of general government consists of wages and salaries.

**Final consumption rate:** is total Final Consumption expenditure expressed as percent of Gross Domestic Product at Market Prices (Current Prices).

**Gross capital formation Rate:** is total Gross Capital Formation expressed as percent of Gross Domestic Product at Market Prices (Current Prices).

Following categorization has been used for industry wise estimates in case of India :

**Primary Sector:** of industries includes Agriculture, Forestry & Fishing and Mining & Quarrying.

**Secondary Sector:** of industries includes Manufacturing, Electricity Gas & Water Supply and Construction.

**Tertiary Sector:** of industries includes other industries of national economy.

### China

**Gross domestic product (GDP):** refers to the final products at market prices produced by all resident units in a country (or a region) during a certain period of time. In the practice of national accounting, GDP is calculated from three approaches, namely production approach, income approach and expenditure approach, which reflect GDP and its composition from different angles.

**Per capita GDP** =  $GDP / \text{annual average population}$ .

**Three strata of industry:** in China economic activities are categorized into the following three strata of industry: Primary industry refers to agriculture, forestry, animal husbandry and fishery industries (except support service activities to agriculture, forestry, animal husbandry and

fishery industries). Secondary industry refers to mining and quarrying (except auxiliary activities of mining and quarrying), manufacturing (except repairs for metal products, machinery and equipment), production and supply of electricity, steam, gas and water, and construction. Tertiary industry refers to all other economic activities not included in the primary or secondary industries.

**Indices of GDP:** measure the change of GDP at constant prices. GDP at constant prices converts GDP based on the current price into a value based on the price of the base period. When adjusted for price changes, the values of two different periods can be compared to reflect changes of both products and production activities.

**GDP by expenditure approach:** refers to the method of measuring the final results of production activities of a country (region) during a given period from the perspective of final uses. It includes final consumption expenditure, gross capital formation and net export of goods and services. The formula for computation is: GDP by expenditure approach = final consumption expenditure + gross capital formation + net export of goods and services.

**Final consumption expenditure:** refers to the total expenditure of resident units for purchases of goods and services from both the domestic economic territory and abroad to meet the needs of material, cultural and spiritual life. It does not include the expenditure of non-resident units on consumption in the economic territory of the country. The final consumption expenditure is broken down into household consumption expenditure and government consumption expenditure.

**Gross fixed capital formation:** refers to the value of acquisitions less those disposals of fixed assets during a given period. Fixed assets are the assets produced through production activities with unit value above a specified amount and which could be used for over one year. Natural assets are not included.

Gross fixed capital formation can be categorized into total tangible fixed capital formation and total intangible fixed capital formation. Total tangible fixed capital formation includes the value of the construction projects and installation projects completed and the equipment, apparatus and instruments purchased (less those disposed) as well as the value of land improved, the value of draught animals, breeding stock and animals for milk, for wool and for recreational purposes and the newly increased forest with economic value. Total intangible fixed capital formation includes the prospecting of minerals and the acquisition of computer software minus the disposal of them.

**Changes in inventories:** refer to the market value of the change in the physical volume of inventory of resident units during a given period, i.e. the difference between the values at the beginning and at the end of the period minus the gains due to the change in prices. The changes in inventories can have a positive or a negative value. A positive value indicates an increase in inventory while a negative value indicates a decrease in inventory. The inventory includes raw materials, fuels and reserve materials purchased by the production units as well as the inventory of finished products, semi-finished products and work-in-progress.

**Net export of goods and services:** refers to the exports of goods and services subtracting the imports of goods and services. Exports include the value of various goods and services sold or gratuitously transferred by resident units to non-resident units. Imports include the value of various goods and services purchased or gratuitously acquired resident units from non-resident units. Because the provision of services and the use of them happen simultaneously, the acquisition of services by resident units from abroad is usually treated as import while the acquisition of services by non-resident units in this country is usually treated as export. The exports and imports of goods are calculated at FOB.

**Final consumption rate:** refers to final consumption expenditures as percentage of gross domestic product by expenditure approach.

**Gross capital formation rate:** refers to gross capital formation as percentage of gross domestic product by expenditure approach.

### South Africa

Base year 2010=100.

**Primary industries** = Agriculture, forestry and fishing and Mining and quarrying.

**Secondary industries** = Manufacturing; Electricity, gas and water and Construction.

**Tertiary industries** = Wholesale, retail and motor trade, catering and accommodation; Transport, storage and communication; Finance, real estate and business services; General government and Personal services.

Footnotes

- (1) The information for 2013 - 2020 is based on current series of CPI (Combined sector) with Base ( 2012 =100 )
- (2) The Food category comprises of the following 12 subgroups of CPI viz “ Cereals and products “ , “ Meat and fish” , “ Egg “ , “ Milk and products “ , “ Oils and fats “ , “ Fruits “ , “ Vegetables “ , “ Pulses and products “ , “ Sugar and confectionery “ , “ Spices “ , “ Non-alcoholic beverages “ & “ Prepared meals, snacks, sweets etc. “
- (3) The weighted average of “Clothing and Footwear” group index and “ Bedding “ section index of CPI has been provided against Clothing, bedding and footwear
- (4) Medical Care corresponds to “ Health “ subgroup of CPI
- (5) The weighted average of “Education” subgroup index and “ Recreation & Amusement “ subgroup index of CPI has been provided against Education, recreation and amusement
- (6) General index corresponds to all the six group indices of CPI for combined sector.
- (7) For months April and May 2020, section wise index was not available due to data paucity. Hence, only ‘Clothing and Footwear’ group index used corresponding to those months.
- (8) The consumer price index numbers for industrial workers for the year 2000 is based on base year 1982 and from 2006 to August, 2020 is based on base year 2001. The series was updated with new base year 2016 w.e.f. September, 2020.
- (9) Annual average for 2020 has been worked out by converting index for September to December, 2020 to base 2001 using linking factor of 3.00 (Food), 2.41 (Fuel & Light), 4.01 (Housing), 1.98 (Clothing & Footwear), 2.28 (Medical care), 1.79 (Education, recreation and amusement), 2.51 (Transport & Communication) and 2.88 (General) for All-India. In the new series, items have been classified based on COICOP classification. Food and Clothing, Bedding & Footwear groups have been renamed as Food & Beverages and Clothing & Footwear groups respectively. Similarly, Medical care has been renamed as Health and Education, recreation and amusement has been made two distinct subgroups namely Recreation & Entertainment and Education.
- (10) The information for the year 2000 relates to base year 1993-1994 and for the year 2005 to 2012 relates to base year 2004-2005 and index for the year 2013 onwards relate to base year 2011-12. **Footnotes**

- (1) Data on components of CPI of 2000 are not available since the classification of CPI was revised in 2001. Due to the revision of the components of CPI in 2016, some of the names and contents of the CPI classification has been changed and the related data is incomparable with the historical data.
- (2) Producer price indices of industrial products refer to the prices of industrial products when they leave factories.
- (3) Price indices for agricultural products refer to that for food processing industry of agricultural products.
- (4) Price indices for raw materials refer to the purchasing price indices for raw materials, fuels, and power.

## Explanatory Notes

### General notes

The retail price is defined as money cost to the consumer of a specified unit of sale which is inclusive of all rebates and discounts etc.

**Consumer price index (CPI):** It indicates time fluctuations of retail prices of goods and services purchased by the consumers for non production consumption within a specified period of time. It is a ratio of value of a fixed basket of main goods and services at the prices of the current period as related to its value at the prices of the base period. CPI is calculated monthly on the basis of statistical data collected while observing price changes in retail trade and service establishments and also in commodity, mixed and food market and as well as on data of actual structure of consumer expenditures of households for the previous year.

**Producer price index:** It measures the average changes in producers' prices over a period of time. It represents bulk transaction generally at the early stage of trading. The price pertaining to bulk transactions may have divergent nomenclatures e.g. farm harvest prices, wholesale prices, procurement prices, support prices, administered prices, import prices, forward prices etc. Wholesale price index relates to the transactions at the primary stage which broadly correspond to producer prices.

### Brazil

The Brazilian Institute of Geography and Statistics (IBGE) is the government organisation responsible for the computation of the Extended National Consumer Price Index (IPCA), which is the official and main inflation indicator of the country. IPCA is used by the Central Bank to monitor objectives set in the inflation targets system. The index is computed on a monthly basis and refers to families inhabiting in urban localities, with monthly income, from any source, ranging from 1 (one) to 40 (forty) minimum wages. The geographical coverage of the index encompasses 16 areas. The indicator ensures a coverage of approximately 90% of urban areas in the geographical scope of the research.

The index tracks the movement of prices of a fixed basket of goods and services consumed by households, conceived from the Household Budget Survey (Pesquisa de Orçamentos Familiares — POF), which depicts the consumption habits of Brazilian families. The weights applied to the calculation of the current consumer price indices of IBGE are based on the Household Budget Survey (POF) conducted in 2017/2018.

Apparel includes clothing (female, male and child); footwear and accessories; jewels and trinkets; fabrics and haberdashery.

### Russia

**Consumer price indices:** (CPI) indicates time fluctuations of prices on goods and services purchased by the consumers for nonproduction consumption within a specified period of time. It measures a ratio of value of a fixed basket of main goods and services at the prices of the current period as related to its value at the prices of the base period. CPI is calculated monthly on the basis of statistical data collected while observing level of prices in retail trade, service and catering establishments and markets and as well as on data of actual structure of consumer expenditures of households for 2 previous years.

CPI is computed for the urban population and it is diffused for the whole population.

**Producer price indices:** (PPI) for industrial goods are compiled on the basis of recording prices for representative goods (services) produced by 10 thousand basic (key) organisations covered by the survey. Average prices and price indices are calculated for more than 1200 representative goods (services) since 2020 year. Producer prices are actual prices for produced and shipped goods (services rendered) provided for selling on the domestic market (except indirect taxes). PPI calculated for representative goods (services) shall be gradually aggregated into indices of corresponding types, kinds, classes, divisions of economics activities. Data on the volume of shipment in value terms of the base period are being used as the weight factors.

### India

**Consumer Price Index:** measures a change over time in prices of fixed basket of goods and services consumed by a household. CPI is widely used as a macroeconomic indicator of inflation, as a tool by governments and central banks for inflation targeting and for monitoring price stability, and as deflators in the national accounts. The Price Statistics Division (PSD) of the National Statistical Office (NSO), Ministry of Statistics and Programme Implementation (MoSPI), has been compiling and disseminating Consumer Price Index for Rural, Urban & Combined Sector since its inception in the year 2011.

[back to content](#)

**The Price Statistics Division (PSD):** of the National Statistical Office (NSO), Ministry of Statistics and Programme Implementation (MoSPI) started compiling Consumer Price Index (CPI) separately for rural, urban, and combined sectors on monthly basis with Base Year (2010=100) for all India and States/UTs with effect from January 2011. It revised the Base Year of the CPI from 2010=100 to 2012=100, incorporating many methodological improvements in consonance with the international practices with effect from January, 2015. Monthly price data are collected from 1114 markets in 310 selected towns and from 1181 selected villages by the Field Operations Division, NSO. The prices are being collected through Web Portals. The CPI for Rural, Urban & Combined sector is released monthly with time lag of 12 days (on the 12th working day of following month or on the next working day of following month, if 12th is a holiday)

**Index number of wholesale prices:** in India is compiled by Office of Economic Adviser, Ministry of Commerce & Industry. The present series has 2011-2012 as the base year and the data is released monthly. It is the most commonly used as measure of inflation in India. Item Basket and the weighting diagram is based on Gross Value of Output as obtained from National Accounts Statistics, 2007. Seasonal Items have also been included and when they disappear, their weight is distributed over remaining items in the sub group on a pro rata basis. Unlike 1993-94 series, in the new series, instead of Public Distribution System prices of paddy and wheat, their procurement prices have been included to correctly represent the first point of sale.

The existing series is based on ex-factory/ex-mine prices in respect of the manufactured items. In the case of Agricultural commodities, however, the prices as quoted in primary wholesale markets are used. The collection of price data is through correspondence & self filing of information. Various units submit the prices electronically through online forms.

The index is compiled on the principle of weighted arithmetic mean according to the Laspeyres's formula, which has fixed base year weights operating through the entire life span of the series up to 2016, and from 2017, the index is compiled on the principle of weighted average method.

### China

**Consumer price indices:** reflect the trend and degree of changes in prices of consumer goods and services purchased by urban and rural households during a given period. They are obtained by combining consumer price indices of urban household and consumer price indices of rural household. The indices enable the observation and analysis of the degree of impact of the changes in the prices of retail goods and services on the actual living expenses of urban and rural residents.

**Producer price indices:** for Industrial Products reflect the trend and degree of changes in general ex-factory prices of all industrial goods during a given period, including sales of industrial goods by an industrial enterprise to all units outside the enterprise, as well as sales of consumer goods to residents. It can be used to analyze the impact of ex-factory prices on gross output value and value-added of the industrial sector.

### South Africa

Break in series, all indices prior to 2008 not official indices. Linking factors used to calculate continuous time series. Linking factors: All items; Urban Area; Rural Area; Housing Indices; Food Indices; Electricity; Clothing Indices; Rent Indices.

## Footnotes

### Brazil

- (5) The data for Brazil refer to vehicles per 100 persons.
- (6) Estimated data.
- (12) Revised data, according to the last population estimate.
- (13) Employed population 15 years and older with work income.
- (14) In 2020, The indicators were calculated with information from the households visited for the first time in each of the four quarters of the year.
- (16) The expenditure on R & D activities on the surveyed units typically results from the households visited for the first time in each of the four quarters of the year. (intermediate consumption, employees' compensation, consumption of fixed capital). The total expenditure on R & D activities is complemented with those units that produce for the market. The units can be public or private for own production, while R & D market producers are all private.
- (17) Gross domestic expenditure on R & D as percentage of GDP. Data are from UIS database.
- (18) The following groups of Nature of Expenditure were considered: Active Personnel and Social Costs; Other Current Expenditures; Investments and Financial Inversions; 2 — This information does not include the following expenses: Retirement and reforms, pensions scholarship resources and financing student, expenses with interest and debt burdens, educational burdens amortizations, current and capital transfers to the private sector.
- (19) Government expenditure on education as % of GDP. Data from UIS database.
- (24) The indicators were calculated with information of the second quarter of the year.
- (27) Domestic general government health expenditure as % of GDP. Data from WHO database.
- (31) Gini Index of Household Income.
- (32) Data from World Bank database Poverty and Equity.

### Russia

- (1) All type TV sets. Per 100 households. By data of sample household budget survey. Data for 2020 are preliminary.
- (7) Personal passenger cars.
- (20) Calculations on the base of the data of the Federal Treasury. Since 2005 including budgets of the state non-budget funds.
- (23) According to data of Censuses of Population 2002, 2010 years and Microcensus of Population 2015 year.
- (25) School Life Expectancy from primary to tertiary education. Data from UNESCO Institute for Statistics (UIS) database.
- (28) Before 2011 year data include expenditures on physical culture and sport.
- (33) Calculations of Gini Index are based on macroeconomical per capita income data and information of sample household budget survey.

### India

- (2) Figures are estimates indicating number of households having TV per 100 households as on 31st March of the year indicated in the table.
- (8) Figures have been derived by dividing No. of registered vehicles as on 31st March of the year indicated in the table (except for 2000 where the data is as on 31st March 2001).
- (21) Information pertains to Financial Year (i.e. April of Year indicated in the table to March next year) and it relates to Expenditure of general government (i.e. Central Government & State Governments Combined).
- (34) Gini coefficient of household consumption has been calculated on the basis of National Sample Survey Periods (i.e. July 1999-June 2000, July 2004-June 2005 & July 2009-June 2010 to July 2011-June 2012) and is based on Mixed Recall Period.
- (37) As on 1.4.2010
- (38) Information pertaining to Full Time Equivalent collected for 2017-18 as on 1.4.2018.
- (39) Revised Estimate
- (40) Budgetary Estimate

### China

- (3) In the fourth quarter of 2012, the National Bureau of Statistics of the People's Republic of China conducted the integrated survey of urban and rural households, unifying the names, classification and statistical standards of urban and rural households. On its basis, we got the ownership data of resident in China, including the number of colour TV sets, cars and personal computers etc.
- (10) In rural household survey of China, cars refer to the automobiles for living use, including vans.
- (15) Average annual wage of staff and workers refers to the average wage level in monetary terms per staff and worker during a year of time.
- (22) Government appropriation for education to GDP.
- (26) Average years of education attained for people aged 15 and above.
- (29) Total expenditure on health as percentage of GDP.
- (35) Data of Gini coefficient are based on per capita annual disposable income.

### South Africa

- (4) Information based on data from the general household survey (GHS) in which household were asked to indicate whether the household contained at least one television set. Not asked whether it was colour. Calculation: Total number of sets/total population x k.
- (11) Data GHS in which household were asked to indicated whether the household contained at least one vehicle in working condition. Calculation: Total number of households with a working vehicle/total population x k.
- (23) General government expenditure on education as a percentage of GDP.
- (30) General government expenditure on health as a percentage of GDP.
- (36) Gini is per capita expenditure excluding taxes.

## Footnotes

- Data from World Bank database Poverty and Equity.
- Percentage of per capita household income by 20% subgroups of population.
- Revised data, according to the last population estimate.
- Persons 15 years old and over.
- Average available in the household, from HBS 2008–2009.
- For education:
  - Special education are included in their respective ISCEDs.
  - Youth and adult education are included in their respective ISCEDs.
  - Includes special education.
  - Includes youth and adult education.
  - Includes professional education programmes.
  - Includes teacher education in ISCED 3 vocational programmes.
  - Until 2005 master degree programmes are classified as ISCED 6, from 2006 master degree programmes are classified as ISCED 5A (second or further degrees). Master and doctoral degree enrollment is not available for 2013.
- Data from UIS database.
- Data from WHO database.
- In 2020, the indicators were calculated with information from the households visited for the fifth time in each of the four quarters of the year.

## Footnotes

- P Preliminary data.
- According to the Sample Monitoring of Population Income and Participation in Social Programs.
  - According to the Sample Household Budget Survey. Data for 2020 are preliminary.
  - The data are from World Bank WDI database and from Rosstat.
  - Estimates of Rosstat by data of sample household budget survey and macroeconomical per capita income data.
  - According to data of Censuses of Population 2002, 2010 years and Microcensus of Population 2015 year.
  - Since 2013 - incomplete coverage.
  - Before 2016 year - according to the Sample Household Budget Survey, since 2016 - according to the Complex Supervision of the Population Life Conditions. Data for 2020 are preliminary.
  - Per capita of urban population.
  - By data of Minobrnauki of Russia. Before 2015 year data are given according to International Standard Classification of Education 1997 year (ISCED97).
  - Before 2015 year - 5 and 6 levels according to ISCED97. Since 2019 - including residency and assistant study.
  - The data are from UIS database.
  - World standard of WHO by all causes.

**Footnotes**

- (1) Pertains to National Sample Survey Rounds (i.e. Period July of the previous year to June of the year mentioned in the table). The information on quintile groups and nutritional intakes pertains to uniform reference period where as that for poverty lines pertains to mixed recall period as per Tendulkar Methodology.
- (2) Information pertains to Financial Year (i.e. April of Year indicated in the table to March next year). Public Expenditure on health & education relates to Expenditure of general government (i.e. Central government & State governments combined).
- (3) As on end of December of the year indicated in the table. The data relates to number of doctors and include Government Allopathic Doctors and Dental Surgeons & Average Population Served in India (Provisional). Number of beds in Government Hospitals only.
- (4) Includes deaths due to Air-crash, Ship Accidents, Collapse of Structure, Drowning, Electrocution, Accidental Explosion, Falls, Factory/Machine Accidents, Accidental Fire, Firearm, Mines or Quarry Disaster, Traffic Accidents, Stampede, Sudden Deaths, Deaths of Women during Pregnancy, Deaths due to Consumption of Illicit/Poisonous Liquor, Killed by Animals, Poisoning, Suffocation, Drug Overdose, Causes not known and causes other than Forces of Nature.
- (5) Information under the column for year 2000 and 2011 is based on Census 2001 and 2011 and is as on 31st March 2001 and 31st March 2011 respectively.
- (6) Pertains to Survey period July - December 2012.
- (7) Information on expenditure pertains to mixed reference period.
- (8) Illiteracy Rate pertains to age 7 years and above for the year 2017, 2018 and 2019. Illiteracy rates are as per PLFS 2017-18, PLFS 2018-19 and PLFS 2019-20.
- (9) Information under the column for the year 2000 and 2011 is based on Census 2001 and 2011 and is as on 31st March 2001 and 31st March 2011 respectively.
- (10) Pertains to Survey period July - December 2012. Figures under tap water for the year 2012 includes piped water/ public taps but excludes bottled water.
- (11) Revised estimates
- (12) Budgetary Estimates
- (13) As on 01.04.2010.

## Explanatory Notes

## General Notes

**Population below international poverty line (1.25\$ a day PPP) as % of total population:** percentage of the population living on less than 1.25\$ a day at 2005 international prices (according to Purchasing Power Parity exchange rates).

**Percentage share of income or consumption by 20% subgroups of population:** share that accrues to 20% subgroups (quintiles) of population.

**Income quintile ratio:** ratio of the average income (or consumption) of the highest (richest) 20% of population to the average income (or consumption) of the lowest (poorest) 20% of population.

**Proportion of population 25 years and over with completed tertiary education:** percentage share of the population aged 25 years and over with completed tertiary education (according to ISCED 5 or 6) to the total population.

## Brazil

The New Household Sample Survey of IBGE (PNAD Continuous)

The National Household Sample Survey - PNAD was an annual survey and was extinguished in 2015. The PNAD was replaced, with updated methodology, by the Continuous National Household Sample Survey - PNAD Continuous.

PNAD Continuous is a quarterly survey and started in the 2012. There are important methodological differences between PNAD and PNAD Continuous. Therefore, the results of these two surveys are not comparable. Thus, the results of the PNAD were erased and replaced by those of PNAD Continuous.

More information about PNAD Continuous can be found at:

[https://biblioteca.ibge.gov.br/visualizacao/livros/liv101561\\_notas\\_tecnicas.pdf](https://biblioteca.ibge.gov.br/visualizacao/livros/liv101561_notas_tecnicas.pdf)

PNAD Continuous started with the labour force investigation, associated with basic demographic and educational information. Gradually other themes and topics supplementary were being aggregated.

According to the rotation scheme adopted by PNAD Continuous, a housing unit stays in the sample for five quarters, then it is withdrawn from the sample. Some themes and topics supplementary are surveyed in determined interview in all four quarters of the year and others are concentrated in determined quarter of the year.

Housing characteristics are investigated in housing units which are being interviewed for the first time in each of the four quarters of the year and information and communication technology characteristics are concentrated in the fourth quarter of the year. So, both themes started being surveyed in 2016.

The National Household Sample Survey - PNAD was an annual survey and was extinguished in 2015. The PNAD was replaced, with updated methodology, by the Continuous National Household Sample Survey - PNAD Continuous.

PNAD Continuous is a quarterly survey and started in the 2012. There are important methodological differences between PNAD and PNAD Continuous. Therefore, the results of these two surveys are not comparable. Thus, the results of the PNAD were erased and replaced by those of PNAD Continuous.

PNAD Continuous started with the labour force investigation, associated with basic demographic and educational information. Gradually other themes and topics supplementary were being aggregated.

According to the rotation scheme adopted by PNAD Continuous, a housing unit stays in the sample for five quarters, then it is withdrawn from the sample. Some themes and topics supplementary are surveyed in determined interview in all four quarters of the year and others are concentrated in determined quarter of the year.

Housing characteristics are investigated in housing units which are being interviewed for the first time in each of the four quarters of the year and information and communication technology characteristics are concentrated in the fourth quarter of the year. So, both themes started being surveyed in 2016.

**Household's per capita disposable income (R\$):** Household's gross disposable income divided by the estimated resident population on 1st July of the respective year.

**Household's per capita savings balance (R\$):** Household's gross savings divided by the estimated resident population on 1st July of the respective year.

**Wage:** it was considered the monthly wage usually received in the reference month (September of each year).

[back to content](#)

a) **Employees:** the wage was the gross monthly income that would normally be entitled to the whole working month and, when the income was variable, it was the average monthly income for the month of reference of the survey year. It were not included 13<sup>th</sup> salary (14<sup>th</sup> salary and 15<sup>th</sup> salary etc.) and profit-sharing paid by the enterprise to their employees. Also the amount received in benefits (housing, food, clothing, transport, meal or food stamps etc.) was not included in the calculation of the income of the employees.

b) **Employers and own account:** the income was the withdrawal usually made monthly or, when the gains was variable, the average monthly withdrawal for the month of reference of the survey year. The withdrawal was the gain (gross income less expense incurred with the enterprise, such as paying employees, raw material, electricity, telephones etc.). It was not included the value of the production of the enterprise used for own consumption.

**Research and development expenditure (% of GDP):** The expenditure on R&D activities on the surveyed units typically results from their own production, with estimatives based on the sum of cost approach (intermediate consumption, employees' compensation, consumption of fixed capital). The total expenditure on R&D activities is complemented with those units that produce for the market. The units can be public or private for own production, while R&D market producers are all private.

**Average years of schooling (Year):** refers to the average of total years of academic education by adults aged 15 years and above (including general education and adult academic education, excluding various non-academic education).

**Explanatory note:** this indicator is one of the most important indicators to reflect the educational attainment or national quality in a country or a region.

**Formula:** Mean years of schooling (of adults) = (sum of years of academic educational years by adults aged 15 years and above/population aged 15 years and above) x 100%, of which, the criteria of various educational levels converted into years of schooling is: never go to school = 0 year; primary school = 6 years; junior middle school = 9 years; senior middle school = 12 years; tertiary education = 16 years.

b) **Employers and own account:** the income was the withdrawal usually made monthly or, when the gains was variable, the average monthly withdrawal for the month of reference of the survey year. The withdrawal was the gain (gross income less expense incurred with the enterprise, such as paying employees, raw material, electricity, telephones etc.). It was not included the value of the production of the enterprise used for own consumption.

**Research and development expenditure (% of GDP):** The expenditure on R&D activities on the surveyed units typically results from their own production, with estimatives based on the sum of cost approach (intermediate consumption, employees' compensation, consumption of fixed capital). The total expenditure on R&D activities is complemented with those units that produce for the market. The units can be public or private for own production, while R&D market producers are all private.

**Average years of schooling (Year):** refers to the average of total years of academic education by adults aged 15 years and above (including general education and adult academic education, excluding various non-academic education).

**Explanatory note:** this indicator is one of the most important indicators to reflect the educational attainment or national quality in a country or a region. **Formula:** Mean years of schooling (of adults) = (sum of years of academic educational years by adults aged 15 years and above/population aged 15 years and above) x 100%, of which, the criteria of various educational levels converted into years of schooling is: never go to school = 0 year; primary school = 6 years; junior middle school = 9 years; senior middle school = 12 years; tertiary education = 16 years.

### Russia

**Growth rate (Index) of real wages:** relative indicator which is calculated by dividing the indices of accrued wage by consumer price indices for respective period of time. Average nominal accrued wage are compiled by dividing accrued wages fund of employees by average annual payroll number of employees. The accrued wages fund of employees includes sums of payments added to employed in the monetary and not monetary forms for fulfilled and unfinished time, the compensatory payments connected with working conditions, surcharges and extra charges, bonuses, occasional incentive payments and also payments of meal and residing, having regular character. Benefits granted to the employees from the state social extra-budget funds are not included in the wages fund.

**Proportion of R & D expenditure to GDP (%):** proportion of internal research and development expenditure to GDP.

**Number of physicians:** include all doctors with the higher medical education engaged in the treatment and sanitary organizations, social security establishments, research institutes policlinics, pre-school establishments, schools, orphanages and others.

**Hospital beds:** are the beds equipped with the required appliances and ready to receive patients.

**Area of parks and green land:** includes area of the common using green plantations (parks, gardens, squares and parkways), forest parks and city gardens, area of gardening of local roads.

**Gini index:** characterizes the level of deviation of the actual distribution of the income of population from the line of the even distribution.

**School life expectancy:** (according to the UNESCO methodology) - number of years a person of school entrance age can expect to spend within the specified level of education.

**Population below international poverty line (1.90\$ a day PPP) as % of total population:** percentage of the population living on less than 1.90\$ a day at 2011 international prices (according to Purchasing Power Parity exchange rates).

### India

**Gini coefficient:** Gini Coefficient in case of India is calculated by NITI Aayog of India on the basis of Consumer Expenditure data (expenditure is used as proxy for income to measure inequality) compiled by National Sample Survey Office. The Gini Coefficient is produced both for uniform reference period and mixed reference period. The information included is based on mixed reference period i.e. different recall periods for different items.

**Tertiary education:** According to Indian Standard Classification of Education (InSCED) 2014, Ministry of Human Resource Development, Department of Higher Education, Government of India, definition of Tertiary Education is as follows:

[back to content](#)

Tertiary education builds on senior secondary education, providing learning activities in specialised fields of education. It aims at learning at a high level of complexity and specialisation. Tertiary education includes what is commonly understood as academic education but also includes advanced vocational or professional education.

In NSS surveys on Employment and Unemployment and on Education 'tertiary education' is not defined. However, for the purpose of this document, those with general educational level 'graduate and above' has been considered as having completed 'tertiary education'.

### China

**Government appropriation for education:** refers to state budgetary fund for education, taxes and fees collected by governments at all levels that are used for education purpose, education fund for enterprise-run schools, income from school-run enterprises, work-study programme and social services that are used for education purpose.

**Percentage of urban population with Access to Gas:** refers to the ratio of the urban population with access to gas to the total urban population at the end of the reference period.

**Urban green areas per Capita:** refers to the ratio of the urban green areas to the total urban population. Area of Urban Green Areas refers to the total area occupied for green projects at the end of the reference period, including park green land, protection green land, green land attached to institutions and other green land.

**Regular institutions of higher education:** refer to educational establishments set up according to the government evaluation and approval procedures, recruiting graduates from senior secondary schools as the main target by National Matriculation TEST. They include full-time universities, colleges, institutions of higher professional education, institutions of higher vocational education, institutions of higher vocational education and others (non-university tertiary, branch schools and undergraduate classes), including total enrollment in full undergraduate courses and in specialized courses.

**Regular secondary schools:** are classified into regular senior secondary schools and junior secondary schools, including: Regular Senior Secondary School referring to education establishment providing senior secondary education service to graduates of junior secondary school; Regular Junior Secondary School referring to education establishment providing fundamental secondary education service to graduates of primary school;

**Vocational secondary schools:** include vocational junior secondary school and vocational senior secondary school, referring to education establishment ratified by education authority at county level or above to enroll graduates of primary school and junior secondary school and provide junior or senior vocational education service.

**Regular primary schools:** refer to education establishments ratified by education authority at county level or above to children of school age and provide primary education service.

**Special schools:** refer to regular or vocational primary or secondary education institutions enrolling children with physical or intellectual disabilities and other special children and teenagers that have demand for special education.

**Pre-primary education institutions:** include kindergarten and preschool class. Kindergarten enrolls three-year-old (and above) preschool children and provides care and education service. Establishment of kindergarten shall be approved by education authority at county level or above or town government, and shall be registered in file. In those regions without the resources of providing three year preschool education to preschool children, one-year preschool class can be set up to provide one-year preschool education service to preschool children.

**Physicians:** refer to licensed (assistant) doctors. Licensed assistant doctors refer to the medical workers who have obtained the licenses of qualified (assistant) doctors and are employed in medical treatment, disease prevention or healthcare institutions, excluding the licensed (assistant) doctors engaged in management job. The classification of licensed (assistant) doctors is clinician, Chinese medicine, dentist and public health.

**Number of licensed (assistant) doctors per 1000 Population:** The formula is: Number of Licensed (Assistant) Doctors per 1000 Population = (Number of Licensed Doctors + Number of Licensed Assistant Doctors) / Population \*1000. The population is the figure of household registration from the Ministry of Public Security.

**Number of beds of hospitals and health care per 1000 Population** = (Number of Beds of Hospitals + Number of Beds of Health Care) / Population \*1000. The population is the figure of household registration from the Ministry of Public Security.

### South Africa

**Documents on higher education include:** Higher diploma, Post higher diploma, Bachelors Degree, Honours Degree, Higher Degree.

### Footnotes

#### Brazil

- (10) Data in concentration (g/m<sup>3</sup>) for some metropolitan areas (Recife, Salvador-Camaçari, Belo Horizonte, Vitória, Rio de Janeiro, São Paulo, Curitiba, Porto Alegre and Distrito Federal) no weighting by population.
- (13) Urban area. Data are from United Nations Global SDG Database.

#### Russia

- (1) Total Freshwater Use.
- (3) Year-end data.
- (8) By data of Rosgidromet. Data on emissions of carbon dioxide, with the account of land use, changing in land use and forestry, are taken from the Russian national inventory of antropogenic emissions by sources and absorption by absorbents of greenhouse gases not regulated by Montreal Protocol for 1990-2019 years.
- (11) Emissions from stationary sources.
- (14) Data are from United Nations Global SDG Database.

#### India

- (4) Data (except for 2013 and 2014) relates to agricultural year (i.e. July of the year indicated in the table to June next year) and is based on Land Use Statistics. Information for 2013 and 2014 are based on Estimation by Forest Survey of India. 2019 data is from India State of Forest Report.
- (6) Perennial crops include most of the fruit crops and plantation crops such as cashew, arecanut, cocoa, coconut and some spice crops. Data relates to agriculture year (i.e. July of the year indicated in the table to June next Year) and pertains to perennial horticultural crops.
- (9) Per Capita Carbon Dioxide Emission pertains to emission by fuel combustion only. Emission are calculated using the IEA's energy balance and the Revised 2006 IP-CC Guidelines. The figure including Land Use Change & Forestry was 0.7 MT in 2000 and 1.08 MT in 2007 as per 'India Second National Communication to the United Nations Framework Convention on Climate Change', Ministry of Environment & Forests.
- (15) Percentage of Population getting safe and adequate drinking water within premises through Pipe Water Supply (PWS). \*: Percentage of Fully covered rural Population having access to safe and adequate drinking water (atleast 40 lpcd) within premises through Pipe Water Supply (PWS)

#### China

- (2) Total freshwater use.
- (7) Data are from World Bank WDI Database, calculating by using "permanent cropland (% of land area)" multiply "land area of China".
- (12) Data of sulfur dioxide emissions per capita refer to the ratio of the volume of sulphur dioxide emission to the average population of the year. Since 2016, sulfur dioxide emissions per capita have been adjusted according to the data of the second national census of pollution sources.

#### South Africa

- (13) Urban area. Data are from United Nations Global SDG Database.

Footnotes

- (1) The data are constant estimates based on studies conducted by Central Water Commission on Reassessment of water resources.
- (2) Includes both terrestrial and marine protected areas.
- (3) Includes National Parks, Wild Life Sanctuaries, Conservation Reserves & Community Reserves.
- (4) As on 31st March/1st April. Protected area as percentage of total geographical area.
- (5) Data from 2009 onwards may not be strictly comparable with earlier years due to change in nomenclature, rationalisation and classification of reporting.
- (6) Provisional data. Reserves position if updated every 5 years. Therefore the latest available data is upto 01.04.2015.
- (7) Expenditure on environment is as per financial year (i.e. April of the year indicated in the table to March next year) and GDP estimate is based on current market price.
- (8) Expenditure on Environment data for 2013 pertains to expenditure as on 31st March, 2014.
- (9) Expenditure on Environment data for 2015 pertains to expenditure as on 31st January, 2016 as per sanctions.
- (10) Expenditure on Environment data for 2016 pertains to expenditure as on 31st December, 2016.
- (11) Year 2014 stands for 2013/2014; Year 2015 stands for 2014/2015; Year 2016 stands for 2015/2016.

## Footnotes

- (1) Since 2018, the data refer to the number of national nature reserves.
- (2) Since 2018, the data refer to the area of national nature reserves
- (3) Data on non-oil and gas mineral reservers are remaining reserves and resources since 2017.
- (4) Data from 2016 is incomparable to that in the previous years.

### Graph 7.1 Utilization of Forest Area (1 000 hectares)

(1) Data pertain to the year 2012 instead of 2011  
(2) Data pertain to the year 2012 instead of 2019

## Explanatory Notes

## General Notes

**Proportion of population using safely managed drinking water services (%):** proportion of population using an improved basic drinking water source which is located on premises, available when needed and free of faecal (and priority chemical) contamination. Improved drinking water sources include: piped water into dwelling, yard or plot; public taps or standpipes; boreholes or tubewells; protected dug wells; protected springs; packaged water; delivered water and rainwater (SDG indicators 6.1.1).

**Proportion of important sites for terrestrial and freshwater biodiversity that are covered by protected areas (%):** is the mean percentage of each important site for terrestrial and freshwater biodiversity (i.e., those that contribute significantly to the global persistence of biodiversity) that is covered by designated protected areas. It is computed by dividing the total protected area within the country by the total territorial area of the country and multiplying by 100 (SDG indicators 15.1.2).

## Brazil

**Fresh water resources:** Historical Average 214 361 is the best information available until 2012.

**Sulfur Dioxides Emissions per Capita:** Data in concentration (g/m<sup>3</sup>) for some metropolitan areas (Recife, Salvador-Camaçari, Belo Horizonte, Vitória, Rio de Janeiro, São Paulo, Curitiba, Porto Alegre and Distrito Federal) no weighting by population.

**Utilization of perennial crop area:** Permanent crops is the land cultivated with long-term crops which do not have to be replanted for several years (such as cocoa and coffee); land under trees and shrubs producing flowers, such as roses and jasmine; and nurseries (except those for forest trees, which should be classified under "forest"). Permanent meadows and pastures are excluded from land under permanent crops.

**Carbon dioxide emissions per capita:** There has been a modification in the figures due to updating the estimates presented at the 3<sup>rd</sup> National Communication of Greenhouse Gases. Estimates updated in 2015 cover the GHG emissions in the 1970-2014 period for all sectors, except for change of land use, which covers the 1990-2014 period. The methodological basis for the estimates is the Brazilian Inventory of Anthropogenic Emissions and Removals of Greenhouse Gases, published by Brazilian Ministry of Science, Technology, Innovation and Communication. For agriculture, energy, industry processes and waste sectors the 3<sup>rd</sup> Inventory methodology has been used. As for land use changes the methodology used was that from the second inventory.

## Russia

**Perennial crop area:** is the part of utilised agricultural area taken up by perennial crops (fruit and berry plantations, grapes, tea, hop, etc.).

**Freshwater Resources:** include internal renewable freshwater resources (river flows and groundwater from rainfall in the country).

**Annual Flows:** (annual freshwater using) are water withdrawals, not counting losses from storage basins.

**Freshwater use:** use of water resources taken from various sources (including seawater) to meet domestic needs. This does not include turnaround water consumption, as well as recycling of sewage and collector-drainage water.

**Proportion of wastewater treated:** is defined as the ratio of the volume of normatively pure water and water normatively purified at wastewater treatment plants to the total wastewater (sewage) discharge volume into surface water bodies (%).

## India

**Per capita carbon dioxide emission:** This has been derived by dividing total carbon dioxide emission by mid year population. Figures indicating net carbon dioxide emission (including removal) with land use change and forestry are occasionally communicated to United Nations Framework Convention on Climate Change by Ministry of Environment & Forests. However, the time series information provided in table 7.1 relates only to emission by fuel combustion using sectoral approach, as provided by International Energy Agency.

## China

**Total water resources:** refer to total volume of water resources measured as run-off for surface water from rainfall and recharge for groundwater in a given area, excluding transit water.

**National protected area:** refers to certain areas of land, waters or sea that are representative in natural ecological systems, or are natural habitats for rare or endangered wild animals or plants, or water conservation zones, or the location of important natural or historic-relics, which are demarketed by law and put under special protection and management. Natural reserves are designated by the formal approval of governments at and above county level. Scenic spots and cultural preservation zones are not included.

**Investment in the Treatment of Environment Pollution:** refers to the proportion of investment in fixed assets in the total investment in harnessing industrial pollution and in the construction of urban environment infrastructure facilities. It includes investment in harnessing sources of industrial pollution, investment in environment protection facilities designed concurrently with construction projects, and investment in urban environment infrastructure facilities.

**Permanent cropland:** is land cultivated with crops that occupy the land for long periods and need not be replanted after each harvest, such as cocoa, coffee, and rubber. This category includes land under flowering shrubs, fruit trees, nut trees, and vines, but excludes land under trees grown for wood or timber.

- (9) Electricity Production data is from Operador Nacional do Sistema Elétrico — ONS.
- (10) Since 2010 data from World Energy Statistics Yearbook 2019.

**Russia**

- (2) Since 2017 year data were corrected in connection with application of the new base year.
- (6) Since 2020 - dewatered, demineralized and stabilized petroleum, including natural gas liquids.

**India**

- (3) The data of India pertains to fiscal year not calendar year i.e. data for 2006 relates to the financial year 2006-07 & likewise. IIP figure for the year 2000 pertains to base year 1993-94, for 2008-2011 pertains to base year 2004-05 and from 2012 onwards as per new series of IIP with base year 2011-12.
- (4) Provisional Data
- (7) April-December, 2020.
- (11) Information pertains to Gross Electricity production in utilities (including thermal, hydro & nuclear) and non-utilities. Data for year 2008 is for calendar year 2008 (not for fiscal year 2008-09 i.e. April,2008 to March,2009).

**China**

- (5) Coverage of industrial enterprises above designed size had been adjusted since 2011, i.e., enterprises with annual revenue from principal business over 20 million yuan from 2011 on and over 5 million yuan prior to 2011.

**South Africa**

- (8) Includes: petrol, jet fuel, illum paraffin, fuel oil, bitumen, LPG.

### Footnotes

(P) Preliminary data.

(1) Since 2010 - including associated gas.

(2) Since 2010 - concentrate of iron ore.

(3) Since 2017 production of steel includes ingots or other primary forms and semis of non-alloy steels, stainless steels and other alloy steels.

(4) Household refrigerators and freezers.

(5) Since 2017 data are not strictly comparable because of changes in the methodology.

(6) In terms of 100% content of nutrients. Since 2010 - mineral and chemical fertilizers.

(7) Including sleepers. Since 2010 - wood, sawn or chipped lengthwise, sliced or peeled, of a thickness exceeding 6 mm; railway or tramway sleepers of wood, not impregnated.

(8) Since 2010 - portland cement, aluminous cement, slag cement and similar hydraulic cements.

Table 8.2.3 - Selected Data on Output of Main Industrial Products - India

Graph 8.2 Electricity Production (billion-kilowatt-hours)

[back to content](#)

## Explanatory Notes

**Brazil**

The reported data on Output of Main Industrial Product reflect production by manufacturing units with more than 30 employees. Production of Mobile Cellular Subscriptions reflects the national production of mobile celular.

**Russia**

**Index of industrial production:** the aggregate index by kinds of economic activities "Mining and quarryng ", "Manufacturing", "Electricity, gas and water production and supply" before 2014 year and since 2014 year by kinds of economic activities "Mining and quarryng ", "Manufacturing", "Electricity, gas, steam and air conditioning supply", " Water supply, water removal, waste management, activity on liquidation of pollution".

**India**

**Index of industrial production:** is a simple weighted arithmetic mean of production relatives, the weights being proportional to gross value of output as available from Annual Survey of Industries (ASI) factory sector. At the industry indicator levels, the weights were allocated in proportion to their gross value of output.

The new series of all India index of industrial production (IIP) with base 2011-12 has a broader coverage of 856 items (clubbed in 407 item groups: Mining-1, Manufacturing – 405, Electricity – 1) comprising 29 from Mining & Quarrying, 826 from Manufacturing and 1 from Electricity Sector having the weightage of 14.4%, 77.6% and 7.99% respectively in the all-India IIP. National Industrial Classification (NIC)-2008, which is as per ISIC Rev. 4, is being followed.

**China**

**Industrial production index in China:** refer to the indices of the PPI-deflated value added of industry (% to the previous year) covering industrial enterprises above the designated size. Industrial enterprises above the designated size refer to those with annual revenue from principal business over 20 million yuan from 2011 on and over 5 million yuan prior to 2011.

**Sawnwood:** refers to manufactured woods using wood sawing machine or manual tools to process log into formation of wood of certain width and thickness of sectional dimensions along longitudinal direction.

**Footnotes**

Mtoe stands for million tonnes of oil equivalent , kgoe stands for kilo gram of oil equivalent and ktoe stands for kilo tonnes of oil equivalent.

**Brazil**

- (1) Primary energy production: includes natural gas rejected and non-utilized.
- (5) Total consumption, total primary energy supply, or gross domestic supply: includes sectorial final energy consumption; losses in transformation, distribution and storage; and energy sector final consumption.
- (7) Energy consumption per capita = total consumption / population.
- (11) Data from Sustainable Development Goals Indicators, UNSD Database.
- (15) Electricity consumption per capita does not include energy consumption in energy sector and losses.

**Russia**

- (11) Data from Sustainable Development Goals Indicators, UNSD Database.

**India**

Information pertains to Financial Year (i.e. April of the year indicated in the table to March next year). Conversion factors have been used for providing data in Oil Equivalents.

- (2) Primary energy comprises of coal, lignite, crude petroleum, natural gas and electricity. The conversion factor (production to energy terms) for each energy product has been updated as per the latest available information and accordingly data has been updated.
- (3) Provisional data.
- (6) Includes energy from coal, lignite, crude petroleum (Crude oil in terms of refinery crude throughput), Natural gas & Electricity (Hydro, Nuclear & other renewable sources electricity from utilities). The conversion factor (production to energy terms) for each energy product has been updated as per the latest available information and accordingly data has been updated.
- (8) The conversion factor (production to energy terms) for each energy product has been updated as per the latest available information and accordingly data has been updated.
- (9) 1 petajoules= 23880000 kgoe. Mid year population has been taken as on 1st October from population projection for india and states 2011-2036, report of the technical group on population projection.
- (16) (Gross generation + Net imports) / Mid year population (As on 31st March of the year). The conversion factor (production to energy terms) for each energy product has been updated as per the latest available information and accordingly data has been updated.

**China**

- (4) Electric power in total primary energy production and total consumption of energy are converted on the basis of equal caloric value.
- (10) Energy consumption per capita is calculated by annual average population.
- (12) Share of renewable energy in total energy consumption, include transformation losses and other losses.

**South Africa**

- (13) Physical energy flowing out of South Africa as measured by the metering system at the South African borders.
- (14) Physical energy flowing into South Africa as measured by the metering system at the South African borders.

- b) Central Electricity Authority, Ministry of Power

**Footnotes**

- (1) Crude oil in terms of refinery crude throughput. MMT means million metric tonnes
- (2) Kwh means Killo Watt Hours
- (3) Provisional data.
- (4) It includes Utilities and Non-Utilities
- (5) It consists of Renewable, Hydro, Nuclear and Thermal.
- (6) Utilities: undertakings of which the essential purpose is the production, transmission and distribution of electric energy. These may be private companies, cooperative organisations, local or regional authorities, nationalised undertakings or governmental organisations.
- (7) From 2010 onwards, Renewable Energy Sources have been shown separately.
- (8) Non-Utilities: An independent power producer which is not a public utility, but which owns facilities to generate electric power for sale to utilities and end users. They may be privately held facilities, corporations, cooperatives such as rural solar or wind energy producers and non-energy industrial concerns capable of feeding excess energy into the system information pertains to Financial Year (i.e. April of the year indicated in the table to March next year).
- (9) Information pertains to financial year.

"Note: Share of renewable energy consumption is provided on the assumption that

- 1. All the renewable energy produced is consumed at the source i.e zero transmission and distribution losses for renewable energy.
- 2. Auxiliary Consumption of Renewable Energy projects is zero."

## Explanatory Notes

**Brazil**

**Consumption of crude petroleum:** refinery oil in put.

**Consumption of petrol:** does not include alcohol and biodiesel. It includes only motor gasoline.

**Energy production from thermal:** includes oil products, natural gas, industrial gas, coal and biomass.

**Primary energy production:** includes natural gas rejected and non-utilized.

**Exports:** include bunkers.

**Total consumption:** includes sectorial final energy consumption; losses in transformation, distribution and storage; and energy sector final consumption.

**Solids:** Mineral and Coal Derivatives (other than coke oven gas), Firewood and Charcoal, sugarcane bagasse, liquor, biomass (Other Renewable) and Other Primary remaining.

**Liquids:** Oil and derivatives, molasses, cane juice, ethanol, vegetable oils (Other Renewable) and NGL (Other Non-Renewable).

**Gases:** Natural gas, coke oven gas, biogas (Other Renewable) and industrial gas (Other Non-Renewable).

**Electricity:** Hydraulics and Electricity, Uranium (U308) and Derivatives, Wind and solar.

**Share of renewable energy in energy consumption:** is the renewable energy divided by the total primary energy supply= final energy consumption + losses in the energy processing and transferring + energy sector consumption + statistical differences

**Russia**

**Electricity production:** refers to gross production of electricity.

**India**

**Total primary energy production:** Primary energy does not include thermal electricity.

**Electricity consumption per capita** = (Gross generation + Net imports) / Mid year population

**China**

Total primary energy production refers to the total production of primary energy by all energy producing enterprises in the country in a given period of time. It is a comprehensive indicator to show the level, scale, composition and pace of development of energy production of the country. The production of primary energy includes that of coal, crude oil, natural gas, hydro-power and electricity generated by nuclear energy and other means such as wind power and geothermal power. However, it does not include the production of fuels of low calorific value, bio-energy, solar energy and secondary energy converted from primary energy.

Total consumption of energy refers to the total consumption of energy of various kinds by the production sectors and the households in the country in a given period of time. It is a comprehensive indicator to show the scale, composition and pace of increase of energy consumption. Total energy consumption includes that of coal, crude oil and their products, natural gas and electricity. However, it does not include the consumption of fuel of low calorific value, bio-energy and solar energy. Total energy consumption can be divided into three parts: end-use energy consumption; loss during the process of energy conversion; and energy loss.

**South Africa**

**General:** The figures populated in this table have been derived from the south African Energy Balance for the respective years. The definitions/descriptions of all energy commodities and activities in our energy balances are aligned to international recommendations espoused in the International Recommendations on Energy Statistics (IRES) document and the IEA's Energy Statistics Manual.

**Technical clarifications**

**Electricity, gas and steam production:** We assumed that this include **production of liquid fuels**

**Nuclear:** The figures were derived using electricity produced with the assumption of 33% efficiency.

**Private consumption:** was assumed to be residential + non-specified other under **Other Sectors** and any unspecified consumption

**Manufacturing:** calculated as the sum of all all industries less commercial and construction

### Footnotes

- (1) Preliminary data, may be reviewed.
- (2) Structure of farm products area by main species based on Harvested areas of farm crops (Agricultural Municipal Production Survey).
- (3) Fruits production considers the following fruits: orange, banana, grape, pineapple, papaya, watermelon, apple, coconuts, passion fruit, mango, tangerine, lemon, melon, guava, peach, persimmon, avocado, cashew nuts, fig, pear, nut, quince. From 2015 included the production of "açai". Pineapple and coconuts data are published in 1,000 fruits units. Conversion: 1 pineapple = 1.5 kg and 1 coconut = 1.5 kg
- (4) Production of meat measured in carcass/dressed weight (Quarterly Animal Slaughter Survey).
- (5) 1 kg corresponds to 1.03 litre.
- (6) Kg of pesticide expressed in active ingredient, not in final formulation.

- Federal Service for State Registration, Cadastre and Cartography (Rosreestr).
- Federal Agency for Fishery.

**Footnotes**

- Preceding year = 100.
- Total sown area.
- Since 2011, data are published in weight after processing.
- Fruits (excluding nuts), berries and grapes.
- Before 2012 yield is given per 1 hectare of plants in fruit-bearing age; for 2012 – 2019 – per 1 ha harvested area.
- Livestock and poultry for slaughter.
- Catch of fish and other live wild aquatic organisms.
- Availability of tractors in agricultural organizations (excluding tractors with mounted digging, ameliorative and other machines), since 2008 excluding micro enter prises.
- Availability of harvesters and beet harvesting machines (excluding plant top gathering machines), since 2008 excluding micro enterprises.
- Mineral fertilizers used per 1 ha of crops in agricultural organisations, since 2008-excluding data on micro enterprises.
- Since 2010 - wood in the rough.
- Calculations by data of Minselkhoz and Rosreestr.
- Preliminary data.

**Footnotes**

- (1) Index numbers and production are as per third advance estimates 2020-21.
- (2) The period of agriculture year is from July (of the year indicated in the table) to the June (next year).
- (3) Data on Livestock product pertains to March (of the year indicated in the table) to February (next year).
- (4) Meat production from commercial poultry farm is included from 2007-2008 onwards.
- (5) Milk includes cow, buffalo and goat milk.
- (6) Poultry eggs include eggs from fowls and ducks.
- (7) Data on number of livestock is produced from livestock census which is conducted at a gap of five years. Information from last 2 Census (12012 & 2019) has been included.
- (8) For 2014 : Final Estimates of 2014-15; For 2017: Revised Final Estimates for 2017-18 (Fruits); For 2019: Final Estimates 2019-20; For 2020: First Advance Estimates 2020-21.

National Bureau of Statistics of China, China Rural Statistical Yearbook 2000-2016; China Statistical Yearbook 2000-2020; and Statistical Communiqué of the People's Republic of China on the 2019 National Economic and Social Development.

**Footnotes**

- (1) Data of indices of agricultural gross output prior to 2003 are calculated at 1990 prices. The new classification for national standard of industry classification has been implemented since 2003 and the gross output value includes the services in support of agriculture, forestry, animal husbandry and fishery.
- (2) Preceding year = 100.
- (3) Ownership of tractors and harvester-threshers in agriculture at year-end includes large, medium and small-sized tractors, harvesters and threshers. Data from 2014 do not include threshers.

## Explanatory Notes

### General Notes

**Cultivated area:** This consists of net area sown and current fallows.

**Average yield of crops:** Average yields per hectare of principal crops have been obtained by dividing the total production by the corresponding total area under each crop.

### Brazil

**Fruits production:** considers the following fruits: orange, banana, grape, pineapple, papaya, watermelon, apple, coconuts, passion fruit, mango, tangerine, lemon, melon, guava, peach, persimmon, avocado, cashew nuts, fig, pear, nut, quince.

**Cultivated area:** includes only harvested area.

**Milk data:** obtained in litres were converted to kg (1kg = 1.03 litre)

Major part of 2016 final data will be available only on September 2017.

**Catch of fish data:** not available after 2011.

**Timber production:** refers to the volume of timber measured and accepted based on the national timber standards after the procedures of logging, bucking, yarding, and finally transporting to timber depots or defined distribution sites.

**Amount of pesticide use.** Pesticide data available from IBAMA administrative data. Kg of pesticide expressed in *active ingredient, not final formulation*. Source: <http://www.ibama.gov.br/relatorios/quimicos-e-biologicos/relatorios-de-comercializacao-de-agrotoxicos>, yearly bulletins, file 'sale by class of use' (vendas por classe de uso)

**Note:** Data for 2020 data will be available on October 2021.

### Russia

**Agricultural production:** is the sum of crop-growing and animal husbandry outputs of all agricultural producers including enterprises of private sector (household enterprises, peasant (farm) enterprises and individual employers) in value terms at actual current prices. To calculate agricultural production index, the indicator of production volume at comparable prices of previous year is used.

### India

Ministry of Agriculture is the nodal agency for collection, compilation & dissemination of agriculture statistics in India.

Directorate of Economics & Statistics in Department of Agriculture & Cooperation, Ministry of Agriculture is the agency primarily involved with Crop statistics and the reporting period for the same is agricultural year i.e. July to June next year whereas Department of Animal Husbandry, Dairying & Fisheries, Ministry of Agriculture produces & disseminates information on livestock with Financial Year as the reporting period (i.e. March-February next year).

**Cultivated area:** consists of Net Area sown and current fallows.

### China

**Indices of agricultural gross output:** The development rates of agricultural gross output value deflated by using producers prices indices.

**Timber production:** refers to the volume of timber measured and accepted based on the national timber standards after the procedures of logging, bucking, yarding, and finally transporting to timber depots or defined distribution sites.

**Amount of pesticide use per unit of cultivated land:** refers to the ratio of total volume of pesticides used to the cultivated area in the same period, usually kg/ha. or kg/mu used as measurement unit.

### South Africa

### Footnotes

#### Russia

- (1) Preliminary Data
- (2) Length of public paved roads in operation (including highways). At the end of the year.

#### India

- (3) The information is as on 31st March of the Year indicated in the table. The information on Highways includes both National and State Highways (Excluding Rural Roads, Project Roads, Urban Roads etc).
- (6) Reference Period is Financial Year i.e. (April of the year indicated in the Table to March next year)
- (7) The figures include crude oil and natural gas pipelines.
- (10) Provisional data.

#### China

- (4) Since 2013, there have been some changes on the classification, so the data from 2013 and on can not be compared with the previous ones.
- (5) All means: including railway, road, waterway and air.
- (8) Since 2013, the statistical coverage of pipeline transport has included China National Offshore Oil Corporation on the basis of China National Petroleum Corporation and China Petroleum & Chemical Corporation.
- (9) All means: including railway, road, waterway, air and pipeline.

## Footnotes

Information on Railways, Civil Aviation & production of vehicles pertains to Financial Year i.e. April (Year Indicated in the table) to March (Next Year) whereas that for registered vehicles /ownership is as on 31st March and that on accidents, injuries and deaths pertains to calendar year.

- It includes passenger vehicles (PVs), commercial vehicles (CVs), three wheelers, two wheelers.
- Includes Cars, Jeeps, Taxis, Buses and Omnibuses. Data is as on 31st March of the year indicated in the table.
- Figures indicate number of cars registered in India as on 31st March of the year indicated in the table except for 2000 where the data is as on 31st March 2001.
- Figures for Road Transport from 2006-07 to 2017-18 is are estimated by Transport Research Wing (MoRT) on the basis of actual GDP growth rate and elasticity of Passenger movement.
- Figures for Road Transport from 2006-07 to 2017-18 is are estimated by Transport Research Wing (MoRT) on the basis of actual GDP growth rate and elasticity of freight traffic.
- Figures for year 2019 & 2020 is provisional
- 2018 and 2019 is Provisional

Footnotes

- (1) Since 2013, the statistical coverage of pipeline transport has included China National Offshore Oil Corporation on the basis of China National Petroleum Corporation and China Petroleum & Chemical Corporation.
- (2) The indicator "Length of Domestic Civil Aviation Routes" has been changed to "Length of Domestic Regular Civil Aviation Routes" from the year of 2011 but the coverage of the statistics remains stable.
- (3) The indicator "Number of Civil Airports" has been changed to "Number of Regular Civil Aviation Airports" from the year of 2011, but the coverage of the statistics remains unchanged.
- (4) The ownership of automobiles excludes three-wheel vehicles and low-speed trucks.
- (5) The number of passenger cars includes the number of small passenger vehicles and minicars.
- (6) Since 2013, there have been some changes on the classification, so the data from 2013 and on can not be compared with the previous ones.

## Explanatory Notes

**Brazil**

**Length of highways:** Refers to federal, state and municipal highways, excluding planned highways. Information on federal highways was published in December 2016 at [www.dnit.gov.br](http://www.dnit.gov.br)

**Russia**

**Passenger traffic (all means):** passenger turnover which is determined multiplying the number of passengers for each position of transportation by the length of distance covered in km. Total passenger turnover is the sum of passenger turnover of the railway, bus, passenger taxi, tramway, trolley-bus, subway, maritime, inland water and air transport.

**Freight traffic (all means):** freight turnover which is calculated multiplying the weight of shipped freight in tons by the length of its shipping in kilometers. Total freight traffic is the sum of freight turnover of the railway, motor, pipeline, maritime, inland water and air transport.

**Public Roads:** refer to the federal roads of federal property; regional and inter municipal roads of the property of constituent entities of the Russian Federation; local roads of the property municipalities as well as of property of settlements, municipal and city districts.

**India**

**Length of Railways in Operation:** This indicates total route kilometers, both electrified and non electrified.

**Length of highways:** excludes urban and project roads.

**Length of Petroleum Pipelines:** includes both onshore & offshore infrastructure.

**Civil Aviation:** information on air traffic and air operations includes operations of Indian Carriers on scheduled both domestic and international services.

**China**

**Length of Railways in Operation:** refers to the total length of the trunk line for passenger and freight transportation (including both full operation and temporary operation).

**Length of Highways:** refers to the length of highways which are built in conformity with the grades specified by the highway engineering standard [Highways WTBZ-Technical Standard JTJ01-88] formulated by the Ministry of Transport, and have been formally checked and accepted by the departments of highways and put into use.

**Length of Petroleum Pipelines:** refers to the actual transport distance of oil (or gas) products, which is in general calculated according to the length of single pipeline.

**Freight Traffic (passenger traffic):** refers to the sum of the product of the volume of transported cargo (passengers) multiplied by the transport distance in a given period of time.

**Freight Traffic of Petroleum Pipelines:** refers to the total amount of oil (or gas) transported through petroleum pipelines.

**Length of Domestic Regular Civil Aviation Routes:** refers to the total length of all domestic periodic civil aviation routes during statistical period.

**Number of Regular Civil Airports Opened:** refers to the total number of areas assigned for civil aviation flights to do take-off, landing, taxiing, parking and other actions.

**Ownership of Automobiles:** refers to the total number of vehicles that are registered and received vehicles license tags according to the Work Standard for Motor Vehicles Registration formulated by the Transport Management Office under the Department of Public Security at the end of the reference period.

## Footnotes

### Brazil

- (1) Data from ITU database.
- (6) Considering population from 10 years old and above.
- (9) Until 2012, comprised only persons who accessed the Internet by personal computer and from 2013 onwards, by any equipment.

### Russia

- (5) Number of user's devices of mobile radiotelephone (cellular) communication.
- (10) Until 2013 - according to the World Bank. Since 2013, the indicator is calculated according to Rosstat as the ratio of the population aged 15-72 years using the internet within 12 months to the total number of the population aged 15-72 years, from 2017 - at the age of 15-74 years.
- (13) Newspapers issued 3 and more times per week (number of titles).

### India

- (2) Data is as on 31st December of the year indicated in the table except for 2000 where it is as on 31st March of the year 2001. Data for main telephone lines pertains to wireline whereas that for cellular mobile telephone pertains to wireless subscription in case of India.
- (11) Information for 2000-2012 is as per ITU database whereas data for 2013 onwards is as per Telecom Regulatory Authority of India, Indian Telecom Services Performance Indicator Report (Various Issues) and is on as 31st December of the year indicated in the table.
- (14) Data relates to 31st March of the year indicated in the table except for 2000 where the same is as on 31st December 2000. Data pertains to registered dailies.

### China

- (3) PHS subscribers are also included in those of the main telephone lines.
- (7) National Bureau of Statistics of China started an household survey in 2013-2014, including both urban and rural households. The coverage, methodology and definitions used in the survey are different from those used for the separate urban and rural household surveys prior to 2013.
- (15) Kinds of newspapers.

### South Africa

- (1) Data from ITU database.  
Household based question:
  - (4) Does the household have access to a telephone line in the dwelling or household? Calculation: Households with a telephone/total population x 1000. Survey data.
  - (8) Does the household have access to a computer in the dwelling or household? Question was only asked in 2005, 2012 - 2017.
  - (12) Does the household have access to an internet connection in the dwelling or household? Available from 2009.
  - (16) Number of current daily newspapers, including those not printing on weekends and public holidays.

## Footnotes

- (1) Until 2013 - according to the World Bank. Since 2013, the indicator is calculated according to Rosstat as the ratio of the population aged 15-72 years using the Internet within 12 months to the total number of the population aged 15-72 years, from 2017 - at the age of 15-74 years.
- (2) Until 2014 year - by data of Household budget sample surveys, at the end of the year. Since 2014 - by data of Sample survey of population on using of information technologies and information-telecommunication networks.

## Explanatory Notes

### Brazil

**Reference period:** in the Brazilian surveys when asking about individual use of ICT refers about last three months according the international recommendation.

**Number of Internet Users per 1000 Inhabitants:** It was considered the inhabitants 10 years old or over. Internet users — persons 10 years old or over who accessed the Internet somewhere (own home, workplace, center of free or paid access, home of other persons or any other place) by PC desktop or laptop (notebook, palmtop, pocket pc or handheld) at least once in the reference period of the last three months.

### Russia

**Main Telephone Lines:** are telephone sets having independent numbers at the public telephone station as well as telephones with a shared line intended for public use. They switched on the public network and render service of local, intercities and international communication.

**Cellular communication:** mobile radio and telephone communication. Mobile communication - complex of technical means (radio and communication equipment, communication lines and structures), which render communication facilities for mobile subscribers and subscribers of public telephone network.

Data on organizations using personal computers and other information and communication technologies are given for organization which are under statistical observation (excluding small business).

### India

**Main telephone Line:** Information relates to wireline connections i.e. connections with (fixed) telephone line connecting the subscriber's terminal equipment to the network. It includes WLL (fixed line extending upto the base unit).

**Subscribers of Cellular Mobile Telephone:** Includes wireless connections.

**Data on Internet User:** Includes information on subscription through both fixed lines as well as wireless (mobile phones) internet subscriptions.

**Number of Daily Newspaper:** includes newspapers in all languages & bilingual/multilingual newspapers.

**Total Internet Subscribers:** Comprises Narrowband Subscribers and Broadband Subscribers. This also comprises Wired Internet Subscribers & Wireless Internet Subscribers.

### China

**Main Telephone Line:** refers to a main line which is a (fixed) telephone line connecting the subscriber's terminal equipment to the public switched network and which has a dedicated port in the telephone exchange equipment. The number of ISDN channels are included. PHS subscribers are included.

**Subscribers of Cellular Mobile Telephone:** refer to number of portable telephone users subscribing to a public mobile telephone service and have access to Public Switched Telephone Network (PSTN) using cellular technology. This includes analogue and digital cellular systems.

**Internet Users:** refer to the inhabitants aged 6 or above and have connected with Internet at least once in the last 6 months.

**Number of Daily Newspapers:** includes all kinds of newspapers, with CSSN (China Standard Serial Number).

**Fixed Broadband Internet Access:** refers to those users registered accessing to the public internet through xDSL, FTTx+LAN, FTTH/O and other broadband access methods at the end of the reference period. By the administrative area, the internet broadband access users can be divided into urban and rural broadband access users. Breaking down by customers, they can be divided into household broadband access users and office broadband access users.

[back to content](#)

**Time Length Accessed to Fixed Broadband Internet:** refers to the actual time use by the fixed broadband Internet access users in the enterprise connected to the public Internet through the fixed broadband network at the end of the reference period.

**Flow Volume Accessed to Mobile Internet:** refers to the flow volume occurred by the mobile phone users (including wireless LAN users) in the enterprise accessing to the public internet or WAP site through the mobile communication network, including uplink and downlink flow.

**Length of Optical Cable Lines:** refers to the sum of the length of the trunk line of the local network, the length of the cable line of the access network, and the length of the long distance optical cable line at the end of the reference period.

**Length of Long Distance Optical Cable Lines:** refers to the actual length of the long distance optical cable used to realize the transmission of optical signals. Overhead cable length is calculated by the actual length of rod road; cable length buried in the underground, underwater, submarine pipelines is based on the channel or pipe length.

**Base Stations of Mobile Telephones:** refer to all the sets of facilities that provides service for wireless receiving and transmitting apparatus for residence, processing the mobile wireless communication between base station and the mobile station, playing relay function between the mobile switching and the mobile stations, monitoring the quality of wireless transmission at the end of the reference period.

**Broadband Internet Access Ports:** refer to all kinds of broadband internet access ports actually installed and operated for the access of the internet users, and do not include narrowband dial-up access ports. According to the main technical modes at present used for the broadband internet access, the xDSL port, LAN port and FTTH/O port are used.

**Number of Websites:** refers to the websites with the domain name or "WWW.+ domain name" as their site addresses, of which, including China's country websites of the top-level domain name (CN) and category top level domain name (gTLD). These domains are registered within the territory of China.

### South Africa

Household based question.

Does the household have access to a telephone line in the dwelling or household?

Does the household have access to a cell phone in the dwelling or household?

Does the household have access to a computer in the dwelling or household? Question was only asked in 2005, 2012 and 2013.

Does the household have access to an internet connection in the dwelling or household? Question was asked in 2005, and then again in 2009, 2010. Available 2009-2013.

Not access to outside sources, just whether they have access in the household.

## Footnotes

### Brazil

- (1) The general government includes federal government, state governments, and local governments, and excludes Central Bank of Brazil and public enterprises.
- (2) Nominal result.
- (7) Total tax revenue corresponds to the fiscal load.
- (10) The Annual average exchange rates used is available in Tables 13.2.1 and 14.1.

### Russia

- (3) Share of deficit/surplus of Federal budget to GDP. The calculation carried out on the basis of data of the Federal Treasury.
- (8) Share of profit (income) tax of organisations and income tax of individuals to revenue.
- (11) The calculation is according to the data of Bank of Russia.

### India

- (4) For all Information, reference year is Financial Year (i.e. April of the year indicated in the table to March next year). For example, figure given for year 2000 here is virtually for financial year 2000-01 which means April, 2000 to March 2001. This is applicable for each other figure in the row.
- (5) The data relates to Revenue Deficit of General Government i.e. Central Government & State Governments combined. For 2011 to 2015, figures given are based on GDP figures relating to new series (i.e. Revised Base year 2011-12=100) and worked out at current market price.
- (9) Revenue pertains to General Government & includes both revenue & capital receipts. Income Tax includes Personal Income Tax & Corporation Tax only. Income Tax is collected by Central Government only.
- (12) Includes Currency with public, deposit money of the public and post office saving bank deposit. M2 supply (year End) in million US \$ has been calculated on the basis of year end exchange rate of the concerned financial years.
- (15) Revised Estimate.

### China

- (13) M2 is calculated using the year-end exchange rates released by State Administration of Foreign Exchange.

### South Africa

- (6) Fiscal year: year begins on 1 April to 31 March of the following year.
- (14) Calendar year : year begins on 1 January to 31 December(year-end). Year end exchange rates are used.  
M2 comprises:
  - \* Notes and coins in circulation outside monetary sector.
  - \* Cheque and transmission deposits.
  - \* Other demand, short & medium term deposits up to 6 months.
  - \* Monthly average exchange rates at year end.

- a) Ministry of Finance, Union Budget (various issues).
- b) Reserve Bank of India, HandBook of Statistics on Indian Economy and Bulletin on Money Stock Measures (various issues).

**Footnotes**

- For all Information, reference year is Financial Year (i.e. April of the year indicated in the table to March next year). As regards Foreign Exchange Reserves, they are given as at the end of Financial Year i.e. 31<sup>st</sup> March (Next year). Foreign Exchange Reserves data for 2017 pertains to week ending 30th March 2018 (latest available data). Month-end data of March will be available with a lag of one month.
- (1) Total Receipts and Total Expenditures pertains to Central Government Receipts and Expenditure. This data is not comparable with previous year's data as past data consists of consolidated Receipts and Expenditures of Central and State Governments. Revenue receipts consists of tax receipt and non tax receipts.
  - (2) The information relates to expenditure (both Plan and Non Plan) by Ministries/Departments of Centre and Union Territories including Plan expenditure of States.
  - (3) Data source for structure of interest rates is: Scheduled Commercial Banks (excluding RRBs) and the Reserve Bank of India. Data on deposit and lending rates relate to five major Public Sector Banks up to 2003-04. While for the subsequent years, they relate to five major banks.
  - (4) Savings deposit rates from 2011-12 onwards relates to balance up to 1 Lakh. Savings deposite rates was deregulated with effect from October 25, 2011.
  - (5) Data on lending rates relate to either Prime Lending Rate (PLR) or Benchmark Prime Lending Rate (BPLR), Base Rate or Marginal Cost of Funds Based Lending Rate (MCLR) (overnight) as the case may be for the relevant year. BPLR system effective November 2003 was replaced by the Base Rate System effective from July 1, 2010. Base Rate System effective from July 1, 2010 was replaced by the MCLR System effective from April 1, 2016.

Note: M1, M2 and M3 as on 31<sup>st</sup> March 2021.

Note: Figures in foreign reserve as on 12<sup>th</sup> March 2021.

## Explanatory Notes

**Brazil**

**Share of Deficit (-)/Surplus of General Government to GDP:** The general government includes federal government, state governments, and local governments, and excludes Central Bank of Brazil (Bacen), and public enterprises. Nominal result.

**Share of Income Tax to Revenue:** Total tax revenue corresponds to the fiscal load.

**M2 Supply (End of the Year):** The Annual average exchange rates used is available in Tables 13.2.1 and 14.1.

**Expenditure:** Data covers Federal Government only.

**Other expenditure:** is the single largest item because it comprises transactions such as transfers to states and municipalities and debt management expenditure.

**Russia**

**Budget Revenues:** monetary funds coming to the budget, excluding funds which in accordance to the Budget Code of the Russian Federation are the sources of financing the budget deficit.

**Budget Expenditures:** monetary funds paid from the budget funds, excluding funds which in accordance to the Budget Code of the Russian Federation are the sources financing the budget deficit.

**Deposit Rate:** average rate on deposits (in national currency) of individuals in credit institutions for up to 1 year.

**Lending Rate:** average rate on loans (in national currency) to legal entities (companies and organizations) in credit institutions up to 1 year.

**Annual rates:** are calculated as the average of monthly data.

**India**

General Government includes both Central Government and State Governments.

**Income Tax:** Income Tax Act, 1961 imposes tax on the income of the individuals or Hindu undivided families or firms or cooperative societies (other than companies) and trust (identified as bodies of individuals associated of persons) or every artificial juridical person. The inclusion of a particular income in the total incomes of a person for income-tax in India is based on his/her residential status. There are three residential statuses, viz., (i) Resident & Ordinarily Resident (Resident) (ii) Resident but not Ordinary Resident and (iii) Non Resident. There are several steps involved in determining the residential status of a person. All residents are taxable for all their income, including income outside India.

M1 = Currency with the Public + Deposit money of the Public

M2 = M1 + Post Office savings banks deposits.

M3 = M1 + Time deposits with banks.

M4 = M3 + Total Post Office Deposits.

**China**

**Revenue of Consolidated Budget:** refers to income for the government finance through participating in the distribution of social products. It is the financial guarantee to ensure government functioning. The contents of government revenue have been changed several times.

**Expenditure of Consolidated Budget:** refers to the distribution and use of the funds which the government finance has raised, so as to meet the needs of economic construction and various causes.

**Share of Deficit/Surplus of General Government to GDP:** = (Revenue of consolidated budget - Expenditure of consolidated budget)/GDP.

**The Contents of Government Revenue** include the following main items:

a) **Various Tax Revenues:** including domestic value added tax (VAT), domestic consumption tax, VAT and consumption tax from imports, VAT and consumption tax rebate for exports, corporate income tax, individual income tax, resource tax, city maintenance and construct tax, house property tax, stamp tax, urban land use tax, land appreciation tax, tax on vehicles and boat operation, ship tonnage tax, vehicle purchase tax, tariffs, farm land occupation tax, deed tax, and tobacco leaf tax, environment protection tax, etc.

b) **Non-Tax Revenue:** including special program receipts, charge of administrative and institutional units, penalty receipts and others non-tax receipts.

**The Contents of Government Expenditure:** include the following main items:

a) Expenditure for general public services; b) Expenditure for foreign affairs; c) Expenditure for national defence; d) Expenditure for public security; e) Expenditure for education; f) Expenditure for science and technology; g) Expenditure for culture, sports and media; h) Expenditure for social safety net and employment effort; i) Expenditure for medical and health care; j) Expenditure for environment protection; k) Expenditure for urban and rural community affairs; l) Expenditure for agriculture, forestry and water conservancy; m) Expenditure for transportation; n) Expenditure for commerce and services, etc.

**South Africa**

M0 = Deposits of monetary institutions with the central bank and banknotes and coin in circulation outside the central bank.

M1 = Notes and coin in circulation plus cheque and transmission deposits and other demand deposits of domestic private sector with monetary institutions.

M2 = M1 plus other short-term deposits held by the domestic private sector.

M3 = M2 plus long-term deposits held by the domestic private sector.

## Footnotes

### Brazil

- (1) According to IMF data
- (11) Cash concept.
- (16) Since April 2015, Brazilian Direct Investment (DI) data is presented in accordance with the sixth edition of Balance of Payments and International Investment Position Manual (BPM6), edited by IMF, which uses the principle of assets and liabilities instead of the directional principle. Additionally, new sources of information enabled the inclusion of flows of reinvested earnings from 2010 onwards. As of BPM6, the expression "FDI" was replaced by "Direct Investment - Liabilities".

### Russia

- (5) According to the Bank of Russia. The data are submitted according to the principle of assets/liabilities. The sign (-) means a decrease.
- (12) At the end of the year. The calculation is according to the data of Bank of Russia.
- (17) At the beginning of the year.
- (18) Data are presented in accordance with the 6th version of the IMF's Balance of Payments and International Investment Position Manual.

### India

- (2) All information in case of India pertains to financial year (i.e. from April 1 of the year mentioned in the table to March end of next year).
- (4) GDP estimates used are at Current Market Prices (with Base Year revised 2011-12=100).
- (6) Provisional Data
- (13) Figures are as on 31st March of the year indicated in the table.

### China

- (3) Data of imports and exports of goods and commercial services come from the State Administration of Foreign Exchange.
- (7) Data of FDI come from the Ministry of Commerce of the People's Republic of China.
- (9) Outflows of FDI from 2003 to 2006 did not include financial intermediation, data for 2007 and onwards included all sectors.
- (15) The scope of external debt was adjusted based on the IMF Special Data Dissemination Standard (SDDS) and consequently the external data with full coverage was released, including the debt in RMB, in 2015 in China. The debt figure at the end of 2014 was also adjusted accordingly for the convenience of comparison. The earlier data related have not been adjusted.

### South Africa

- (8) These indicate on a net basis an increase in liabilities and a decrease in assets.
- (10) These indicate on a net basis a decrease in liabilities and an increase in assets.
- (14) This includes gold.

**Footnotes**

- (1) Public customs figures adjusted for balance-of-payment purposes.
- (2) Investments by foreigners in undertakings in South Africa in which they have individual or collectively in the case of affiliated organisations or persons, at least 10 per cent of the voting rights.
- (3) Investments by South African residents in undertakings abroad in which they have at least ten per cent of the voting rights.
- (4) Transactions on the current, capital transfer and financial accounts.
- (5) Commodity gold .Prior to 1981 net gold exports comprised net foreign sales of gold plus changes in gold holdings of the South African Reserve Bank and other banking institutions.
- (6) Liabilities related to foreign reserves include all foreign liabilities of South African Reserve bank and short term foreign loans to the central government by international organisations.

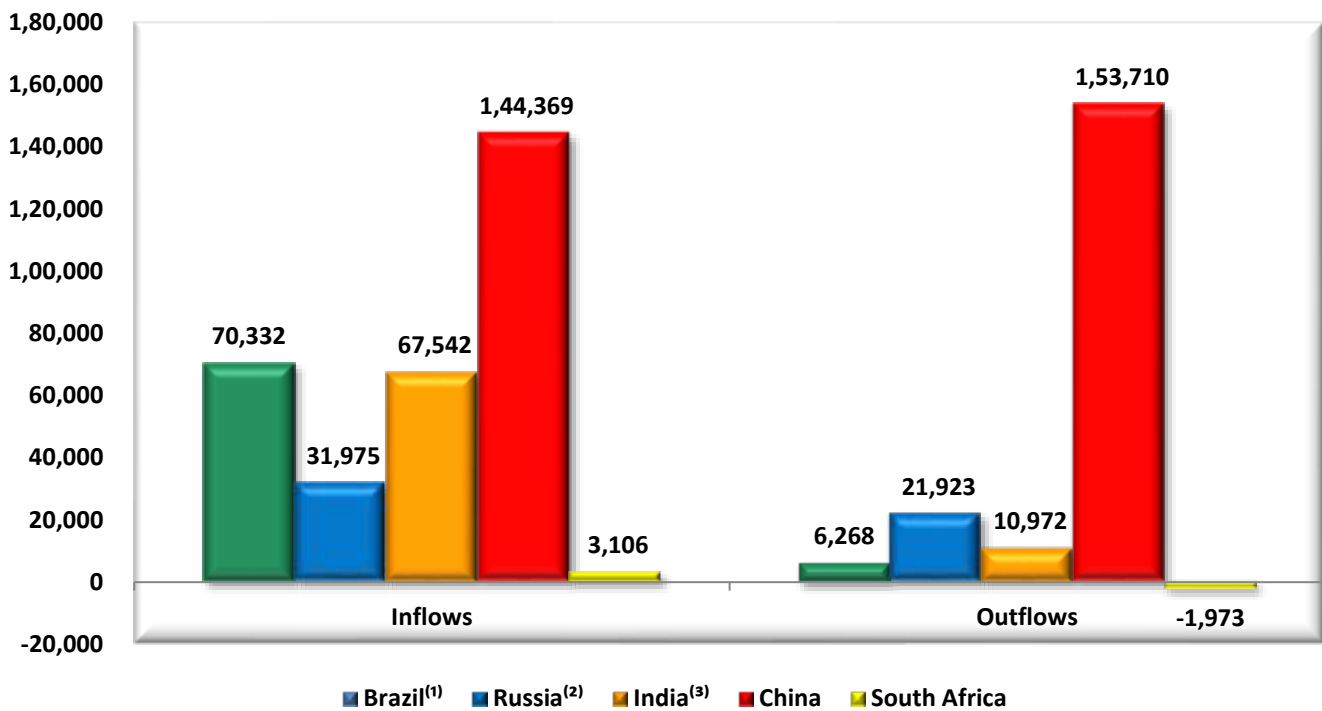

**Graph 14.1 Ratio of exports of goods and commercial services to imports of goods and commercial services (%)**

(1) Data pertain to the Year 2018 instead of 2020 and according to IMF data.

**Graph 14.2 Inflows and Outflows of FDI in 2020 ( Million US\$)**

- (1) Inflows and Outflows figure pertain to the Year 2017 instead of 2020.
- (2) Inflows and Outflows figure pertain to the Year 2019 instead of 2020.
- (3) Inflows figure is provisional.

## Explanatory Notes

### Brazil

Since April 2015, Brazilian Direct Investment (DI) data is presented in accordance with the sixth edition of Balance of Payments and International Investment Position Manual (BPM6), edited by IMF, which uses the principle of assets and liabilities instead of the directional principle. Additionally, new sources of information enabled the inclusion of flows of reinvested earnings from 2010 onwards. As of BPM6, the expression "FDI" was replaced by "Direct Investment - Liabilities".

The title of the Table 14.3.1 has been changed because the new balance of payments methodology (BPM6).

The Table 14.4.1 has been adjusted to the new balance of payments methodology (BPM6).

### Russia

**Export of goods:** removal of goods (commodities) from the Russian Federation territory without of a guarantee of the return them back. Export includes the removal of domestically produced goods and reexport of goods as well. Domestically produced goods include also foreign manufactured goods imported into the country and significantly reprocessed and as a result changed their qualitative and technical characteristics. Re-exports - goods imported to the territory of the Russian Federation and then removed from its territory without payment of customs dues, taxes and application of embargo of economic restrictions. Recording of the good exports is realised by FOB prices or border prices of the exporting country.

**Import of goods:** importing of goods into the Russian Federation territory without a guarantee of the return them removed back. Imports include the brought goods for consumption in the economy and good imported into the country territory in according to the reimport system. Re-imported goods are those moved out from the Russian Federation territory and then moved in this territory without payment of custom dues, taxes and application of embargo or economic restrictions. Recording of the good import is realised by in franco-border prices of the importing country (CIF), i.e. prices of goods include expenditures on the insurance and transportation to the border of the importing country.

**Balance of payments:** data are presented in accordance with the 6<sup>th</sup> version of the IMF's Balance of Payments and International Investment Position Manual.

In the table 14.2.2.1 data on import and export of Russia are presented about the major trade partners and BRICS countries.

### India

**Exports:** are credited to the country of final destination as declared by exporters in the shipping bill whether that country possesses a sea port or not. The country of final destination is defined as that to which goods exported from India are intended to pass whether by sea and land or by sea only or by air without interruption of transit, save in the course of transshipment or transfer from one means of conveyance to another.

**Imports:** are classified with reference to the countries whence they were consigned to India and not with reference to the countries whence they were shipped directly to India. The country of consignment is defined as that from which the goods have come whether by land or sea or by sea only or by air, without interruption of transit save in the course of transshipment or transfer from one means of conveyance to another. Thus, the countries where goods are consigned are not in all cases the countries of actual origin of goods produces in one country maybe purchased by a firm in another country and then dispatched after an interval to India.

**The data for imports, exports and re-exports:** given are according to the Indian Trade Classification (based on harmonized Commodity description and coding system).

**External debt to GDP:** includes Long term debts as Multilateral loans, bilateral loans, International Monetary Funds Trade Credit, External Commercial borrowings; non-Resident Indian deposits, Rupees debts and Short term deposit.

Under current account of the BoP, transactions are classified into merchandise (export and imports) and invisibles. Invisible transactions are further classified into three categories, namely a) Service- travel, transportation, insurance, Government not included elsewhere (GNIE) and miscellaneous (such as, communication, construction, financial, software, news agency, royalties, management and business services); b) Income; and c) Transfers (grants, gifts, remittances, etc.) which do not have any quid pro quo. Under the Capital Account, capital inflows can be classified by instrument (debt or equity) and maturity (short or long term). The main components of the capital account include foreign investment, loans and banking capital. Foreign investment, comprising Foreign Direct Investment (FDI) & portfolio investment consisting of Foreign Institutional Investors (FIIs) investment, American Depository Receipts, Global Depository receipts, Global Depository receipt (ADRs/GDRs) represents non-debt liabilities, while loans (external assistance, external commercial borrowings and trade credit) and banking capital, including non-resident Indian (NRI) deposits are debt liabilities.

## China

**Foreign Trade statistics and Coverage** China's official external trade statistics is implemented by General Administration of Customs of the Peoples Republic of China. It's compiled from the declarations, which are made to the Customs by imports, exports or their agents and subject to verification by customs officers at the time of customs clearance. External Statistics comprise all merchandise passing through China's Customs territory (with the exceptions mentioned below). Including: goods from abroad entering customs warehouses, bonded areas or special economic zones (SEZ) and goods leaving abovementioned areas to abroad; goods for inward or outward processing or assembling and subsequent re-exportation or re-importation; goods on lease for one year or more; goods imported or exported by foreign-invested enterprises; international aid or donations, etc. Excluding: Customs statistics do not cover temporary imports or exports; goods on lease for less than one year; travellers' personal effects; ship's and aircraft' bunkers and stores obtained abroad; monetary gold and coins being legal tender; goods in transit through China.

**Import and Export Valuation** Imports are valued on a CIF basis, which is based on the transaction value and all freight, insurance and other charges incurred before discharging the goods at the first port of entry of China. Exports are valued on a FOB basis, which is based on the transaction value at China's port of shipment equivalent of the actual price at which the goods are sold. The statistical value is expressed in RMB and USD respectively. Any transaction value in terms of a currency other than RMB or USD shall be converted into RMB or USD at the exchange rate between issued by the State Administration of Foreign Exchange.

**Trading Partner:** The country of origin is recorded for imports while the country of final destination for exports. The country of origin refers to the country or region where the imported goods have been grown, mined or manufactured. If two or more countries (regions) were involved in the manufacture of the products, the place where the last substantial working or processing was carried out will be recorded as the country (region) of origin. However, the countries (regions) of origin of the imported goods are not quite clear will be recorded as "country unknown". The country of final destination refers to the country or region where the exported goods are to be consumed, utilized or further processed or manufactured. In instance where the country of final destination can not be ascertained, the exports will be credited to the final country (region) dispatched to as known at the time of exportation.

**Inflows of FDI:** refer to the investments inside China by foreign enterprises and economic organizations or individuals (including overseas Chinese, compatriots from Hong Kong, Macao and Taiwan, and Chinese enterprises registered abroad), following the relevant policies and laws of China, for the establishment of ventures exclusively with foreign own investment, Sino-foreign joint ventures and cooperative enterprises or for co-operative exploration of resources with enterprises or economic organizations in China. It includes the re-investment of the foreign entrepreneurs with the profits gained from the investment and the funds that enterprises borrow from abroad in the total investment of projects which are approved by the relevant department of government.

**Outflows of FDI:** refer to investment made by domestic enterprises and organizations (referred to as domestic investors) in foreign countries and Hong Kong, Macao and Taiwan regions in the form of cash, in-kind, intangible assets and other ways, and the economic activities centering on controlling the operation and management of those foreign enterprises.

**The Balance of Payments (BOP):** is a statement that summarizes economic transactions between residents and nonresidents during a specific time period.

**The International Investment Position (IIP):** shows at a point in time the value of : financial assets of residents of an economy that are claims on nonresident or are gold bullion held as reserve assets; and the liabilities of residents of an economy to nonresidents.

## Explanatory Notes

### General Notes

Tourism, Rome 1963:

**International Visitor:** An international visitor to a country is any person visiting that country on a foreign passport and the main purpose of whose visit is other than the exercise of an activity remunerated from within the country or establishment of residence in the country. This definition covers two segments of visitors: "Tourists" and "Same Day Visitors".

### Brazil

**Foreigner Tourist Arrival:** Arrivals of non-residents persons across international borders of Brazil classified as a tourist (or overnight visitors), and with a stay for less than a year for any main purpose : 1- Personal (Holidays, leisure and recreation, Visiting friends and relatives, education and training, health and medical care, religion and pilgrimages, shopping and others) and Business and professional.

They are not counted as visitors/tourist: employed by a resident entity, border workers, seasonal workers, other short and long term workers, nomads and refugees, transit passengers not entering the economic and legal territory, crews on a public modes of transport, persons entering the country to establish there their country of residence, long- term students and patients and their family, diplomats, consular staff, military personnel and their dependants, armed forces on maneuver.

### Russia

**A tourist:** is a person who visits a country (place) of temporary stay in medical and treatment, recreational, cognitive, sports, professional, business, religious and other purposes without engaging in activities related to obtaining income from sources in the country (place) of temporary stay, for a period from 24 hours till 6 months or at least one night in the country (place) of temporary stay.

**Foreign (Inbound) Tourist Visit:** is the visitor`s travel from the moment of entry into the country to the moment of departure.

### India

A "foreign tourist" is a person visiting India on a foreign passport, staying at least twenty four hours in the country, the purpose of whose journey can be classified under one of the following headings:

- (i) Leisure (recreation, holiday, health, study, religion & sport)
- (ii) Business, family, mission, meeting.

### China

**Foreign Tourists Arrivals:** refer to foreign visitor arrivals who come to China (mainland) for sight-seeing, vacation, visiting relatives, medical treatments, shopping, attending conferences or to engage in activities of economic, cultural, sports and religious. In compiling statistics, each time of entering China (mainland) is counted as one person-time.

**A BRIEF OVERVIEW OF THE  
STATISTICAL SYSTEM OF BRAZIL**

## I. Organizational structure of the IBGE

The Brazilian Institute of Geography and Statistics (IBGE) is ruled according to the Law No. 5.878, of May 11th, 1973, and the Statute- Decree No. 3.740, of June 13th, 2003. It is linked to the Ministry of Planning, with the role of coordinating the Brazilian Statistical System and being the main producer of official statistics in Brazil.

The Brazilian official statistics are produced by IBGE, Central Bank, ministries and statistical state agencies. IBGE is the official statistics bureau responsible for the production, analysis and dissemination of Statistical information (demographic, economic and social), as well as geographical, cartographic and geodetic information and those related to natural resources and environment.

Besides its functions in the Statistical System, IBGE is also the main producer of geoscientific information and has the role of coordinating the National Cartographic System. One of the main projects of the production of geoscientific information is the construction of the National Spatial Data Infrastructure — INDE. The purpose of the INDE is to catalogue, to integrate and harmonize geospatial data from Brazilian institutions, producers and sponsors of this kind of data, so that the data can be easily located, accessed and used for several uses and for any user who has internet access.

IBGE is responsible for the construction, provision and operation of the Brazilian Geospatial Data Site — SIG Brazil, as well as for the management of the Brazilian Directorate of Geospatial Data — DBDG. It is also responsible to prepare the proposal for obtaining the necessary resources for the implementation and maintenance of INDE.

The programs carried out by IBGE are fundamental for both the government and the society. Several public policy actions are based on the information produced by IBGE on the Brazilian reality.

In order to produce statistical and geoscientific information, IBGE is present countrywide, with units at headquarters, in Rio de Janeiro, and in state and municipal levels, with the following composition: Collegiate bodies of senior direction: Technical Council, Board of Trustees, Board of Directors; Channels of direct and immediate assistance to the President: Cabinet, Attorney General; Sectional bodies: Internal Audit, Executive Board; Specific individual organs. Directorate of Surveys, Directorate of Geosciences, Directorate of Informatics, Centre for Documentation and Information Dissemination, National School of Statistical Sciences, 27 State Units (26 state and Federal District), with 564 agencies to collect and disseminate data.

The production of statistics and geoscientific information is carried out by the Directorate of Geoscience and Directorate of Surveys.

These departments are supported by the Directorate of Informatics, which ensures the infrastructure of computer hardware and software and data communication. The Centre for Documentation and Information Dissemination is in charge of the dissemination policy for the results of all surveys carried out by the institution, publicizing them online, including micro data, free of charge.

The Executive Board is accountable for planning, budget and overall coordination of IBGE's work.

The Directorate of Surveys is responsible for the production of social, economic and demographic statistics as well as for the production of synthesis to the System of National Accounts and Social indicators. It is also responsible for coordinating National Statistical System, systematically calling meetings with users and other producers of statistical information.

The Directorate of Geosciences is responsible for the production of geographical, geodetic and cartographic information, as well as those related to environmental and natural resources. It also coordinates the fundamentals Geodetic and Basic Cartography plans.

IBGE maintains the National School of Statistical Sciences, which offers the following courses: Bachelor of Science degree in Statistics, Post Graduate Diploma in Environmental Analysis and Land Management, Masters in Population Studies and Social Research and training programs for IBGE technicians.

The units of IBGE at headquarters are responsible for the design of surveys, analysis of results and coordination of the teams working at the national level.

The units of IBGE located throughout the national territory are responsible for the collection, review and submission of primary statistical data to headquarters.

These units also conduct field activities related to geodesy and cartography.

## II. Work program for the production of statistics

In 2017, IBGE has updated its Strategic Plan 2017–2027 in order to set goals and targets for the future years. Thus, the Strategic Plan is the main instrument of governance of the institution.

The program of work and its schedule are discussed by all technical and infrastructure areas before being consolidated into IBGE'S Strategic Plan. This is submitted to the Planning Board, composed by IBGE's President and directors, which evaluates and approves it.

IBGE's Strategic Plan subsidizes the preparation of the Federal Government Multi-Year Plan (PPA, in Portuguese) for the same period. The PPA covers all areas of government and describes the main objectives and goals for various organizations and ministries.

The institutional goals to be met in a semester have been set at the beginning of each semester. Institutional goals encompass the full range of publications planned for the period. These goals are approved by the Board and broadly disseminated, both internally and on the internet. They are an item in the objective evaluation of the institution's performance in accomplishing its mission.

IBGE's work program is presented to various Advisory Committees, which are composed of renowned members in the area, who discuss methodological issues and assist in setting priorities.

The Advisory Committees cover the following areas: Population Census, Agriculture Census; National Index of Consumer Prices; Mortality Statistics; Planning Control and Evaluation of Agricultural Statistics; Brazilian Regional Accounts.

As the demands for information not included in the predetermined work program cannot be satisfied with the resources available, they are met through agreements with the concerned governmental entities, which fund additional surveys. Examples of additional surveys are those demanded by the Ministries of Health, Education and Social Development.

IBGE also cooperates with various ministries, such as the Ministry of Finance, and the Central Bank for the preparation of National Accounts.

Annually, the Ministry of the Economy provides IBGE with the Annual List of Social Information (RAIS) and the General Register of Employed and Unemployed Persons (Caged), which consist of the set of administrative records used to update the Central Business Register (CEMPRE) joining information from Annual Enterprises Surveys of IBGE. CEMPRE is used to select the sample of enterprises for the economic surveys, which has replaced the Economic Censuses since 1990's. To set its long-term lines of work, IBGE holds regular meetings with producers and users of social, economic and territorial information. These meetings aim at preparing the revision and expansion of the General Plan of Statistical and Geographical Information, based on mobilization and consultation to producers and users of information, including governmental institutions, survey institutes, NGOs, Scientific associations, as well as technicians and researchers interested in the production, dissemination and use of information.

This action resulted in the preparation of a diagnosis of the state of the art of production of information in the sphere of public services and the mapping of gaps, identifying opportunities for improvement and demands for new information.

The growing demand for socioeconomic and demographic information, as well as the inclusion of new issues, requires research in shorter time intervals.

In 2020 IBGE created the Pulse Enterprises Survey COVID19 in order to get answers about the effect of the pandemic in the enterprises. It aims to estimate the impacts of the COVID-19 pandemic on the Brazilian economy, having as its survey unit the non-financial companies representing the activities of Industry, Construction, Trade and Services.

One solution to fit the statistical offices to this new reality has been the adoption of models that address a systematic conception, with the production of integrated information sources and databases.

[back to content](#)

The Integrated System of Household Surveys (SIPD) is integrated by the Continuous National Sample Survey of Household (PNAD Continuous), the Household Budget Survey (POF) and National Healthy Survey (PNS). SIPD requires intensive contact with users and producers of information. In this sense, the steps in the development of SIPD have been presented in seminars and conferences sponsored by IBGE.

In 2020 IBGE created the National Sample Survey of Household PNAD COVID19 to estimate the number of people with reported symptoms associated with the flu syndrome and monitor the impacts of the COVID-19 pandemic on the Brazilian labor market. Despite the Pandemic, it is important to highlight that IBGE guaranteed the maintenance of its statistical production.

### III. Social and Economic Statistics

The following Ministries and Institutions are part of the Social and Economic Statistics partnership:

- Ministry of Education;
- Ministry of the Economy;
- Ministry of Health;
- Institute of Applied Economic Research — IPEA;
- Ministry of Justice and Public Security;
- Ministry of Citizenship;
- National Institute of Educational Studies and Research Anísio Teixeira — INEP;
- Brazilian Institute of Geography and Statistics — IBGE;
- Central Bank of Brazil;
- National Treasury Secretariat.

One of the main goals of the partnership on social and economic statistics is to integrate the various database of social and economic information derived from surveys and administrative records, in order to promote the effective coordination and governance of the national statistical system.

### IV. Census Planning and Monitoring Meeting

IBGE invests in strengthening the principle of transparency, allowing society to know and follow the development of its activities. This initiative has been created, from 2010 Brazilian Census, in order to broaden participation of local communities in the processes and dissemination of the studies, surveys and general maps developed by the institution.

The Census Planning and Monitoring Meeting include the participation of representatives from IBGE, as well as executive, legislative and judicial representatives of municipalities and representatives of other local civic organizations.

Due to the COVID-19 pandemic, the Brazilian Population Census scheduled for 2020 was postponed to 2022.

### V. Technical cooperation

The following nationwide technical cooperation may be highlighted:

- Ministry of the Economy;
- Ministry of Health;
- Ministry of Education;
- Ministry of Agriculture, Livestock and Supply
- Ministry of Women, Family and Human Rights
- Ministry of Justice and Public Security;
- Ministry of Citizenship;
- Ministry of Culture;
- National Justice Council (CNJ).

Regarding international technical cooperation agreements, the following work may be highlighted: Specialized Meeting on Statistics of MERCOSUR — the Cooperation Project in Statistics towards the integration MERCOSUR and the strengthening of its national and regional institutions through the development, improvement, harmonization and integration of the production and dissemination of statistics.

In the period of 2010–2020, IBGE has been conducting international technical cooperation agreement on technology and methodology on population and agricultural censuses; social, demographic and economic statistics with many countries.

## VI. Interaction with the international community

IBGE has extended its participation in the international Statistical community with United Nations Statistics Division — UNSD, Statistical Conference of the Americas — SCA, Conference of European Statistics — CES, Organization for Economic Cooperation and Development — OECD, World Tourism Organization — WTO, International Labour Organization — ILO, World Bank, Inter-American Development Bank the Community of Portuguese Speaking Countries — CPLP, BRICS, among others.

## VII. Courses and conferences for the press and general users

In the last two decades, IBGE has expanded the role of communication and the relationship with the press, as an alternative way of publicizing its work and building its image and credibility before the public.

In press conferences, the release is available for participants at the beginning of the event. At the same time, indicators and commentary on survey results are published at the IBGE's website.

Besides structural surveys, IBGE monthly publishes about ten short-term data. Thus, approximately 100 press conferences are held at IBGE a year.

The publication of the so-called short-term data is regulated by Decree No. 355, issued on November 5, 2007, and signed by the Ministry of Planning. According to the decree, survey results must be sent to government officials at 7 a.m., i.e., two hours in advance of public access to the data, which happens at 9 a.m. As to access to information, IBGE releases, on this website, the list of state official who have the precedence over the public, a fact that ensures the transparency of the procedure.

Qualifying journalist is essential to improve the reports they write on IBGE surveys. In recent years, the Coordination of Social Communication (CCS) has organized several courses for journalists. Courses on more complex information were held (e.g. national accounts and census) as well as training for the use of digital tools that allow quick access to statistical information.

## VIII. Access to the internet and other access

IBGE provides several ways for accessing the information it produces, so that the public is better served: publications (books and periodicals); free telephone consultation; a Central Library, located at the Centre for Documentation and Information Dissemination in Rio de Janeiro; a connection with the Department of Documentation and Information Dissemination at the IBGE State Units, located in all Brazilian state capitals.

IBGE provides electronic products and services that are the main media through which information such as specific files with data on population, economy, cartography, geodesy, natural resources and environment in free access in the website (<http://www.ibge.gov.br>). Besides the electronic publications the IBGE web page has two important databases to stand out: Aggregated Statistical Tables (SIDRA in Portuguese) — Database with information grouped in territorial level that allows the users to construct their own tables according and compare data to selected information; and Statistical Multidimensional Database (BME in Portuguese) - Database with microdata information that allows users to construct tables according to selected information and confidentiality constraints. This one requires internet subscription.

**A BRIEF OVERVIEW OF**  
**THE STATISTICAL SYSTEM OF RUSSIA**

Since 2017, according to the decree of the President of the Russian Federation, the Federal State Statistics Service (Rosstat) has been subordinated to the Ministry of Economic Development of the Russian Federation. Adoption of the new structure aims to align and delimit the spheres of Rosstat and the Ministry of Economic Development in matters of reconciling official statistical methodology.

Rosstat is the authority responsible for production of the official statistics on social, economic, demographic, ecological and other dimensions of society.

National statistical system in the Russian Federation is based on the principals of centralized structure. The main task of the national statistical system is to provide timely, comprehensive and objective information on the socio-economic development of Russia, its regions and economic sectors to the governmental authorities at all levels, media, scientific community, business entities, population and international organizations. In order to achieve this aim the Federal plan of statistical works has been developed. It defines the main directions of statistical monitoring of socio-economic and demographical processes in the country. The Federal plan is worked out by Rosstat in cooperation with other governmental agencies and adopted by the Government of the Russian Federation.

### Rosstat main functions

To submit the official statistics in accordance with the established regulations to the resident and the Government of the Russian Federation, Federal Assembly of the Russian Federation, other governmental entities, including regional authorities, media, legal entities and individuals, and also to international organizations;

To develop and approve within its power the official statistical methodology for the federal statistical observation and official statistics production in accordance with the established regulations; to ensure that methodology complies with international standards and the UN Fundamental Principles of Official Statistics;

To approve federal statistical observation forms and instructions on their completion;

To coordinate activities in the field of official statistics while developing Federal plan of statistical works, proposals on its updating;

To maintain, provide methodological support and conduct federal statistical observations and to process collected data;

To develop and maintain national classifications of technical, economic and social data in accordance with the established regulations;

To ensure within its power protection of confidential information received as a result of statistical observation;

To provide users with official statistical and other information in accordance with established regulations;

To implement internationally adopted statistical practices, gained from the membership of the Russian Federation in international organizations.

### I. Statistical system: Principles of organization

The national statistical system is a network of interacting governmental entities and bodies that collect, process and disseminate statistics, describing the pace of socio-economic and demographic development of the country.

The system is developed in accordance with the administrative territorial division of the country in order to ensure provision of comprehensive and objective statistics on socio-economic development of the Russian Federation, its regions, industries and economic sectors to the public authorities and all levels of government, the media, scientific community, business entities, public and international organizations.

The system comprises two organizational levels: federal, represented by Rosstat Head Office, and regional level, represented by Rosstat regional offices.

### II. Federal level of the state statistics

Federal level of the state statistics involves Rosstat Head Office, Main Computing Centre, Scientific Research Institute for problems of socioeconomic statistics, Information and Publishing Center "Statistics of Russia".

### III. Regional level of state statistics

Russian Federation is divided into 85 constituted entities (regions). In 54 constituent entities (republic, oblast, autonomous area, territory) Rosstat has its regional offices. Besides, there has been established 12 interregional offices. Rosstat regional and interregional offices collect, process statistics, provide data to the republic, provincial and regional authorities and other users.

### IV. Legal basis of the official statistical activities

Federal State Statistical Service activities are regulated by the Constitution of the Russian Federation, federal laws, Decrees of the President and the Government of the Russian Federation, international treaties of the Russian Federation. The basis of the statistical activities in Russia is the Federal Law “On official statistical accounting and the system of national statistics in the Russian Federation” of 2007 (as amended).

Carrying out of major statistical surveys, such as Population Census and Agricultural Census is supported by the specific federal laws. In order to provide Rosstat with all necessary data aiming at creating national information resources, the Government of the Russian Federation issued an act on obligatory provision of primary statistical and administrative data.

### V. Emerging challenges

Timely, accurate, reliable official statistics on social, economic, demographic, ecological and other dimensions of the society is vital for the country’s socio-economic development and governance.

Nowadays the Russian statistical system is being developed in the environment of significant socio-economic changes, implementation of the international standards of financial data reporting. This transition defines the demand for new approaches in official statistics as well as creation of a flexible statistical information system, responding to changes occurring in the society.

Development of the statistical system is based on further technological modernization, implementation of new planning and decision-making methods and improvement of human resources.

The principal aspect of Russian statistics modernization is higher transparency of statistical methodology and a broader access to official statistics for all users.

In 2020 Rosstat introduced 2024 Rosstat Development Strategy. It determines goals, objectives and measures for the implementation of the state regulatory policy in the field of official statistics, the development of the Federal State Statistics Service (Rosstat) and the system of official statistics of the Russian Federation until 2024. It also defines the main directions and measures for the improvement of the performance of Rosstat and the development of statistics in the Russian Federation.

The Strategy key focuses are:

- Digitalization of statistical production process;
- Reducing the reporting burden on respondents;
- Better coordination of statistical activities;
- Meeting user needs and improving confidence in official statistics;
- Improving statistical methodology;
- Intensification of international cooperation;
- New approaches to human resource management;
- Optimization of the administrative processes in Rosstat;
- Implementation of the projects of a national value.

A draft of the updated strategy (Strategy 2.0) is currently being developed.

**A BRIEF OVERVIEW OF**  
**THE STATISTICAL SYSTEM OF INDIA**

India, consisting of a number of States and Union Territories (UTs), has a federal structure of Government and the Indian Statistical System functions within the overall administrative set up of the country. The division of responsibility for administration between the Union Government and the State Governments is on the basis of three-fold classification of all subjects, namely, the Union List, the State List, and the Concurrent List. The Concurrent list represents the subjects where both the Union and State Governments can operate, and it includes the subject "Statistics". There is a further division of responsibility, by subjects or groups of subjects, among the different Ministries/Departments of the Union Government and among the Departments of State Government, on the basis of their administrative functions.

The Indian Statistical System functions on the overall pattern of the federal structure of the Government. Large-scale nation-wide censuses/surveys viz. Population Census, Economics Census, Agricultural Census and Livestock Census, various socio-economic sample surveys including the Annual Survey of Industries are centrally conducted. Compilation of National Accounts, preparation of all-India prices and industrial production indices are also centrally undertaken. The State statistical organizations collect and generate data on a number of variables focusing on the State Government priorities. Ministry of Statistics and Programme Implementation (MOSPI) at Central level and State Directorates of Economics and Statistics (DESS) at State level coordinate the overall statistical activities in their respective domains.

### Statistical System at the Centre

The Ministry of Statistics and Programme Implementation (MOSPI) is the nodal agency for planning and facilitating the integrated development of the statistical system in the country, including laying down norms and standards in the field of official statistics, evolving concepts and definitions, suggesting methodologies of data collection, processing and dissemination of results. The Ministry has two wings viz. National Statistical Office (NSO), commonly called 'Statistics Wing' and the 'Programme Implementation (PI) Wing'.

**National Statistical Office (NSO):** The NSO is headed by Secretary and Chief Statistician of India assisted by three Director Generals. The National Statistical Office is responsible for coordination of statistical activities in the country, and evolving and maintaining statistical standards and has 11 major Divisions under the three Director Generals. (i) National Accounts Division (NAD), Economic Statistics Division (ESD), Price Statistics Division (PSD) and Social Statistics Division (SSD) are under Director General (Statistics). (ii) Coordination and Publication (CAP) Division, Data Informatics and Innovation Division (DIID) and Training Division are under Director General (Coordination & Administration) (iii) Survey Design and Research Division (SDRD), Field Operations Division (FOD), Data Quality Assurance Division (DQAD) and Survey Coordination Division (SCD) are under Director General (Survey).

NSO has a premier training institute called National Statistical Systems Training Academy (NSSTA) located near Delhi which has been conducting national/international statistical training programmes since its inauguration in February 2009 for capacity building in the area of official statistics.

**Programme Implementation Wing:** The Programme Implementation Wing is headed by Additional Secretary and has two divisions viz. Infrastructure Project Monitoring Division (IPMD), and Member of Parliament Local Area Development Division (MPLAD). IPMD compiles report on on-going Central Sector Infrastructure Projects costing Rs. 150 crore and above on time and cost overruns to provide an overview of the performance with a view to highlighting slippages, if any, in respect of Power, Coal, Steel, Railways, Telecommunications, Ports, Fertilizers, Cement, Petroleum & Natural Gas, Roads, and Civil Aviation. MPLAD scheme was launched in 1993 to provide a mechanism for Members of Parliament to recommend works of developmental nature for creation of durable community assets based on local needs. The scheme addresses locally felt development and infrastructural needs of the community and bridges the gap for developmental works.

MOSPI, both NSO and PI wing generate a lot of statistical information that is used by policy planners, researchers and other users. Besides the NSO, most of the Ministries/Departments in the Union Government dealing with different subjects such as Agriculture, Water, Health, Education, Labour & Employment, Rural Development sectors etc. have their own statistical establishments to perform statistical activities for the respective Ministries/ Departments, and they are generally headed by senior level statistical functionaries to facilitate proper coordination with NSO. Most of these Departments bring out respective statistical data/publications.

### National Statistical Commission

The National Statistical Commission (NSC) was constituted on 12th July 2006 to serve as a nodal and empowered body for all core statistical activities of the country and to evolve, monitor and enforce statistical priorities and standards and ensure statistical co-ordination. The NSC has four Members besides a Chairperson, each having specialization and experience in specified statistical fields. The functions of the commission consist of identifying the core statistics, which are of national importance and are critical to the development of the economy; constituting professional committees or working groups to assist the Commission on various technical issues, exercising statistical coordination between Ministries, Departments and other agencies of the Central Government, monitoring and reviewing the functioning of the statistical system in the light of laid down policies, standards and methodologies and recommending measures for enhanced performance.

### Indian Statistical Institute

The MOSPI also has an autonomous Organization under its domain, viz. the Indian Statistical Institute (ISI), which is a premier statistical institute of international repute, devoted to research and teaching, and the applications of Statistics in the Natural and Social Sciences. Founded by Professor P.C. Mahalanobis in Kolkata on 17th December, 1931, the institute gained the status of an Institution of National Importance by an act of the Indian Parliament in 1959. The Headquarters of ISI is located in Kolkata and additionally, there are four centres located in Delhi, Bangalore, Chennai and Tezpur.

### Statistical System in the States

The Directorates of Economic and Statistics (DESS) in the States/UTs act as the nodal agencies for coordination of all statistical activities in the States/UTs. Most of the States/UTs have District Statistical Offices (DSOs) which act as the field offices for collection and compilation of statistical data for the districts. The DESS perform almost the same functions in the States/UTs as the NSO at the Centre, viz., bringing out some key statistics, coordination with the Central and State statistical agencies, dissemination of statistics, etc.

### Legal support for collection of data

Data collection in India is largely based on a voluntary response. However, a legal framework is also available in the form of Collection of Statistics Act 2008, Census Act 1948. The Collection of Statistics Act 2008 is administered by the Ministry of Statistics and Programme Implementation while another Act viz. Census Act 1948 is administered by the Office of the Registrar General and Census Commissioner of India under the Ministry of Home Affairs, to collect population and other demographic data. Besides the two important Acts, there are a number of other Acts, Rules and Procedures administered by concerned line Ministries/Departments for collecting statutory administrative returns, which generate data on the related subject.

### Initiatives

MoSPI is developing a National Integrated Information Platform (NIIP) for official statistics in the country. NIIP will be the state-of-the-art digital repository of all official statistics with homogenized meta-data. NIIP will provide high end platform for data analytics and interpretation of socio-economic data to Central Ministries/State Governments and other stakeholders, including general public. Platform will also have a dashboard on fact sheet of Indian Economy with socio-economic and macro-economic indicators for monitoring and decision making. An integrated learning management system and dashboards on National Sample Survey results are also made part of this project.

For adoption of best practices in the field of Big Data and alternative data sources in official statistics India has recently acquired the official membership in United Nations Global Working Group on Big Data for Official Statistics.

MoSPI is also developing a Generalised Survey Solution platform for surveys to be conducted through Mobile Devices. It will facilitate real-time collection, validation and processing of data and will reduce the time lag in releasing the survey results.

### Emerging challenges

In the face of rapid major technological and socio-economic changes, official statistical landscape is becoming more complex, expectations of policy makers are increasing exponentially, and the system is expected to deliver best possible statistics in more efficient and innovative ways.

As a result of increased penetration of digital technologies, the amount of information available is increasing exponentially and with improved access to the public. The central and state governments are rapidly intensifying their efforts to harness these new sources of data. These developments provide a new challenge for the national statistical system to align and converge the information flow across varied sources so that an integrated picture emerges for more effective and timely policy interventions.

[back to content](#)

Monitoring of progress on Sustainable Development Goals (SDGs) also places new demands on the need for quality data and statistics, disaggregated by location, sex, age, income group and other dimensions of development. NSO is taking lead to respond to these demands by harnessing administrative sources and surveys.

There is a need to evolve innovative techniques for exploiting new data sources (big data sources, etc.) and will require involvement of research and other institutions so that new ideas can be crowd sourced, incubated and developed for use in the national statistical system.

National statistical system is operating in a dynamic environment with new opportunities and challenges. The COVID-19 pandemic has swept across the world, causing tremendous social and economic upheaval and profoundly altering the everyday lives of billions of people. In this pandemic, the National Statistical Offices have found themselves facing unprecedented challenges. The COVID-19 outbreak is impacting on the ability to collect and process data in the traditional manner. In India, all data collection for surveys and censuses so far have mostly been through face to face interviews. MoSPI is working on modifying its data collection system to become multi modal, and a hybrid model of contemporary survey instruments like CAPI, CATI and CAWI is being worked out.

**A BRIEF OVERVIEW OF**  
**THE STATISTICAL SYSTEM OF CHINA**

Since its establishment, National Statistical System of the People's Republic of China has been developed and improved in over 70 years' process of reform and adjustment to meet the new demands for the new conditions and situation. The Statistical Law of the People's Republic of China stipulates that the State shall establish a centralized and unified statistical system, with a statistical administrative structure under unified leadership and with each level assuming responsibility for its own work. The Chinese Government organizes and undertakes statistical surveys, collects, compiles and releases statistical data, and provides high-quality statistical services for economic and social development based on laws.

## I. Government Statistical System

The government statistical system comprises the government comprehensive statistical system and the government departmental statistical system. The government comprehensive statistical system is consisted of the statistical institutions established through a top-down model and relevant statistical staff from all the administrative levels. National Bureau of Statistics of China is established under the Central Government, independent statistical institutions are established in local governments at and above the county level, and governments of townships and towns are staffed with full-time or part-time statisticians, who are responsible for the statistical work.

### 1) National Bureau of Statistics of China

As an organ directly under the State Council, the National Bureau of Statistics of China (NBS) is responsible for directing and coordinating the statistical work throughout the country. In the entire national statistical system, NBS is a main provider of national statistical data and an organizer, leader and coordinator of the government departmental statistics and local statistics. Pursuant to the Statistics Law of the People's Republic of China and other national regulations, the main function of NBS is to be responsible for organizing, directing and coordinating the statistical work throughout the country, to formulate statistical policy and planning, basic national statistical system and unified statistical standards, approve the statistical standards of departments, draw up a plan or scheme for important general surveys of the national conditions and strength jointly with the government departments concerned, organize and conduct the important general surveys of the national conditions and strength such as Population Census, Economic Census and Agricultural Census; organize and conduct statistical surveys of key industries of the economy; collect, aggregate, collate and provide the statistical data related to the surveys, and synthetically collate and provide the basic national statistical data, and to check, administer and publish the basic national statistical data, and to administer the departmental and local statistical survey programs by law.

NBS internally sets up 18 functional departments and 12 institutions directly under the NBS, responsible for integrated coordination, construction of statistical laws and regulations, formulation of statistical system and standards, organization and implementation of statistical investigation, national accounts, economic analysis, data dissemination and development, etc.

NBS of China also establishes Survey Offices in each province (municipality, autonomous region) and a survey team in each city (prefecture, autonomous prefecture and league) and in one-third of counties (cities at county level, districts and banners), which are as agents detached by NBS and vertically administrated under NBS, and are mainly responsible for the surveys of key statistical data required for the macroeconomic control and national accounts assigned by NBS mainly through sampling surveys.

### 2) Local Bureau of Statistics

Independent statistical institutions are established in local governments at and above the county level, and statistical stations are established or statisticians are staffed in the people's governments of townships and towns, who are responsible for carrying out their tasks of national statistical surveys and for organizing, guiding and coordinating the statistical work in their respective administrative areas. The statistical institutions of local governments at various levels are subordinated to the dual leadership of the governments at their level and the statistical institutions at higher level, in terms of statistical work, mainly under the leadership of the statistical institutions at higher level.

### 3) Departmental Statistical System

Other ministries of the State Council and departments of local governments at various government levels do, according to the needs of their statistical work, establish statistical institutions and staffed with statisticians, forming a departmental sta-

[back to content](#)

tistical system. Its main function is to organize in accordance with laws and regulations and govern the statistical work within the departments, to execute the tasks of national statistical surveys, to draw up and carry out statistical survey plans within the departments and to collect, compile and provide statistical data, to make statistical analysis and exercise statistical supervision over the implementation of plans of the departments and of the enterprises or institutions under their jurisdiction.

## II. Statistical Laws

Whether government agencies (mainly statistical agencies) or statistical respondents, must comply with the statistical laws, organize or support and coordinate statistical surveys according to the statistical standards and statistical survey methodologies formulated based on the laws.

The Statistics Law of the People's Republic of China was initially formulated in 1983 and revised twice in 1996 and 2009 respectively by the Standing Committee of the National People's Congress of China. Based on the reality of the economic and social development and statistical work, the Statistical Law embodies the basic spirits of the Fundamental Principles of Official Statistics of the United Nations and is the basic compliance to undertake statistical work.

In order to implement the Statistical Law, a series of statistical laws and regulations were formulated, such as Regulations on Implementation of the Statistical Law, Regulations for National Economic Censuses, Regulations for National Population Census and Measures for Survey Programs of Departmental Statistics, etc. According to the Statistical Law, the survey programs are classified as national, departmental and local survey programs as per the Statistical Law.

## III. Statistical Surveys

NBS collects statistical data mainly through periodical censuses and regular statistical surveys, and sorts out statistical data through ad hoc surveys and administrative registry records. At present, the important general surveys of the national conditions and strength by NBS include Population Census, Agricultural Census and Economic Census, and around 70 ad hoc surveys and regular statistical surveys, including agriculture, industry, energy, investment, construction, trade and external economy, services, urban and rural households, price, society and science and technology, labor force, wages and salaries, etc., are organized and conducted. These surveys cover main aspects of economy, society, population, environment and resources. The contents of both the censuses and surveys basically cover all the aspects concerned with economy, society, population, environment and resources.

The government departmental statistics involve traffic, tourism, finance, banking, import and export in customs, utilization of foreign capital, culture, education, health, science and technology, registry of permanent residence, social development, etc.

## IV. Release of Statistics and Provision of Statistical Products

In order to provide the official statistics and products on China to the whole society and international community more in quantity, shorter in time lag, and better in quality, NBS releases statistical survey data and supplies with products via statistical processing through various channels and in various ways. For the time being, a system of regular releases of statistical information has been established, including various well-incorporated types, such as press conference, internet release, public data bank and publications, "Statistics Info" through WeChat and official mobile information service platform, as well as the paper products mainly of varieties of yearbooks, which enable the release and provision of statistical data and products more efficient in time, richer in contents and more extensive in coverage of audience. NBS has set up four micro data laboratories at the Headquarters of NBS, the Tsinghua University, etc. for the development and utilization of micro data by experts from government departments under the State Council, relevant institutions of higher learning and research institutions. In addition, the statistical institutions in 31 provinces, autonomous regions and municipalities, as well as many cities and counties have also formed their own relevant regular patterns for timely data release, which forms a hierarchical and widely covered layout for statistical data release and provision in China.

## V. The Reform and Development of China's Statistics

China Economy is at an important stage of structural transformation and upgrade. The fast development and profound change in China's society and economy have posed newer and higher demands on the statistical system in China. Since 2012, with its great efforts on reform of the statistical production modes, NBS has basically established a business register of estab-

[back to content](#)

ishments featuring authenticity, completeness and timeliness, a standardized and uniform questionnaires system for business surveys, the convenient and applicable software for data collection and processing, and a safe and efficient online direct reporting platform for business statistics across China. With an open attitude and the courage to innovative, the National Statistical System in China is actively seeking reform on national accounts, exploring and promoting statistical monitoring on the new economy (new industries, new types of business and new business models) and developing and improving relevant statistical standards to better serve the socio-economic development. Meanwhile, the National Statistical System in China is also actively advancing interdepartmental information sharing, tapping the potential of big data by taking advantage of administrative records and survey data from other departments, and gradually enhancing the role of big data in terms of assessment, supplement and substitution of regular statistics. China will continue to improve the statistical system and methodologies with unremitting efforts, extensively adopt modern information technology, continue to expand channels for statistical services, improve service quality and build up an advanced statistical survey system to better ensure data quality and serve the socio-economic development.

**A BRIEF OVERVIEW OF**  
**THE STATISTICAL SYSTEM OF SOUTH AFRICA**

The South African Statistical system is nearly 100 years old, but has only served the needs of all its peoples for a relatively short period. The advent in 1994 of the democratic dispensation provided the production of statistics with two organizational model options for transformation.

The first model was to centralize the production of most of the statistics into a single agency, the national statistical office (NSO) which was the then Central Statistical Service (CSS). The CSS was later transformed into Statistics South Africa (Stats SA) consisting of a head office and branches in the provinces, and much later on regional offices were established at sub-provincial level. The minority of the statistics excluded from centralization were largely of a financial nature such as the balance of payments. These would be generated by the relevant agencies including the South African Reserve Bank (SARB) and the National Treasury (NT). Indeed the feeling that centralization was the way to go was prevalent both within Stats SA and in other organs of state.

The second model was to decentralize the production of most of the statistics whereby the various organs of state would produce statistics on the basis of their specialist subject areas. Naturally statistics-producing organs of state would constitute a statistical production system which would require coordination. The model ultimately adopted was a product of an evolutionary process. Statistical production faced five major pressures which overlapped in some areas. First was ideological transformation from a focus on “own affairs” of the apartheid political dispensation to a focus on integration of the total population and geography of the new state. This translated into transformation of the demographics of the CSS, integration of the Bantustan statistics offices into the CSS, and establishment of provincial CSS offices to facilitate data collection by head office. Second was the data gap facing the new government with regard to policy and programme development. Alleviation of poverty and inequality, especially service delivery, and the provision of developmental opportunities were unquestionably urgent. This provided the imperative for the 1996 census of population and housing. Third was the rationalization of the statistical series produced so they could be relevant to the aspirations of the citizenry. The rationalization included the introduction of the production of social statistics in addition to the existing economic statistics. Fourth was the drive to improve the quality of the statistics produced by the NSO. Fifth was the skills deficit across the statistics system to produce high quality statistics.

Although they are still around at different levels of intensity, the pressures mentioned above were most intense during, and coincided with, the tenure (1995–99) of the first head of the CSS which later became Stats SA. During this period the transformation model of statistical production was the centralize done. However, overtime it had become increasingly clear that Stats SA had very limited capacity to cater for most statistical needs of users. In the same breath the potential of other organs of state for filling the gap between what Stats SA produced and what users needed was recognized. New statistical legislation was introduced and the current Statistics Act (No. 6 of 1999) was promulgated in 1999. The Act specifically provided for Statistician — General as executive head of Stats SA as well as coordinator of statistics produced by other organs of state. It was a landmark for the production of statistics in the country because it defined a new direction for the strategic and work programmes of Stats SA as well as defining the role of other organs of state in the production of statistics. Incidentally the Act coincided with the change of name of the NSO from CSS to Stats SA.

In 2000 a new head took over the reins at Stats SA and immediately embarked on a new vision for statistical production in the country. Although the new vision was as yet to be formally defined, it was hinged on coordination of statistical production. A National Statistics Systems Division (NSSD) was established at Stats SA to tease out the coordination process. The NSS concept was adopted by a Cabinet Lekgotla in January 2002. Although the SANSS was included in the Programmes of Action (POA) of the government, for the next eight years or so it lacked prominence especially at Stats SA for three main reasons. First was the relatively perennial capacity constraint. Second and most significant was the continued pressure to get Stats SA as an entity to work more effectively and efficiently with particular regard to the quality of its own products. The third was the challenge of change management.

It was not until 2009 that the NSS concept influenced the strategic direction of Stats SA. Since then the department’s five-year strategic plan and the annual work programme have undergone a strategic shift that emphasizes implementation of statistical coordination as mandated by section 14 of the Statistics Act. As its new vision and mission indicated, the department assumed a leadership position by partnering with other organs of state to advance statistical development in the country. The shift has been widening statistical production beyond the product of Stats SA to setting up a system to support other organs of state to

[back to content](#)

produce statistics of good quality. Building on the strategic gains made in the five year strategy (2009–2014) Stats SA changed its strategic focus for the period 2015–2019 to “use” of statistical information for Transparency, Accountability, Results-based management and Transformation.

In 2020, the organisation reached an inflection point in light of the external disruptions and how to remain relevant and responsive within a declining resource base.

External disruptions are changing the world, including the COVID-19 pandemic and the digital and data revolution. Revolutionary advances in technology are reshaping the way data and information are sourced, generated and disseminated.

User needs for data and information to address the socio-economic challenges in the country are growing exponentially. The system of national statistics in South Africa is not fully responding to the country’s diverse and wide-ranging information needs. The system must seek opportunities that will capitalise on these diverse and new data sources as a solution to the country’s information gap, but it will necessitate extraordinary intervention and investments. The data ecosystem provides an opportunity for statistical systems to redefine their business models, embracing new participants that are more agile than current conventional data producers.

Stats SA’s 2020-2025 strategic plan builds on the gains made in the past but sets out an ambitious path of embracing an evolving data ecosystem that will transform the way the organisation work and the way it leads the statistical system in the country to be responsive to growing user demands for sustainable development.

The following four strategic outcomes will guide the NSO to achieve its vision

- **Insightful data** - Data and information are responsive to user demands and bring deeper understanding and insight for informed decisions. Insightful data speaks to the information requirements for development and sustainability concerns of humankind, at a level that is within the grasp of the nation’s people and global citizens.
- **Agile operating model** - The business operations are lean, efficient and flexible. An Agile operating model enables flexibility and responsiveness to the use of innovative development practices to deliver statistical products and services to users better, faster and more cost efficient.
- **Interconnected statistical systems** - People, systems and technology are interconnected through collaboration, partnerships and platforms. An Interconnected statistical system is a network of various data systems, institutions, technological resources, human resources and partnerships based on shared principles that are interoperable and interconnected.
- **Transformed capability** - The capability (people, systems and technology) of the organisation and statistical system is transformed. Transformed capability refers to a major shift in an organisation’s strategic capabilities in terms of its human, technological and organisational capital so that it can drive business transformation and change in order to remain relevant and deliver better outcomes for its stakeholders.

Over the next five years, the organization aims embrace new partnerships and data sources to strengthen the statistical information system in the country. It will invest in research and deeper data analysis for new and better insights. It will explore innovative and revolutionary methods, processes and technology to transform business processes. The NSO will invest in new capabilities and skills required for the future both from a technology and data science perspective. Leading the digital transformation of the organisation will be a prerequisite to ensure that the NSO is well positioned in the data ecosystem.
